Sommario/riassunto	Luminescence, for example, as fluorescence, bioluminescence, and phosphorescence, can result from chemical changes, electrical energy, subatomic motions, reactions in crystals, or stimulation of an atomic system. This subject continues to have a major technological role for humankind in the form of applications such as organic and inorganic light emitters for flat panel and flexible displays such as plasma displays, LCD displays, and OLED displays. Luminescent Materials and Applications describes a wide range of materials and applications that are of current interest including or

Sommario/riassunto	This volume investigates cultural migrants: people who, from their own

free will, move to another country because of their interest in the target language and culture. Chapters include studies on cultural migrants acquiring French, Italian, Spanish and English and consider linguistic, psycholinguistic, sociolinguistic and pragmatic aspects of language acquisition. Cultural migrants have social and psychological advantages when acquiring a second language as adults, and the study of their linguistic knowledge and production increases our understanding of the possibilities and limits of L2 ultimate attainment. The work thus fills a gap in our understanding of high-level proficiency and will be of interest to researchers working in the field of SLA, as well as to social scientists studying the relationship between language, culture and integration.
