

1. Record Nr.	UNINA990001748100403321
Autore	Cantore, Vito
Titolo	Aspetti climatici e zone fitoclimatiche della Basilicata / Vito Cantore, Francesco Iovino, Gerardo Pontecorvo
Pubbl/distr/stampa	Cosenza : CNR, 1987
Descrizione fisica	49 p. : in cofanetto + 3 tavole ; 24 cm
Collana	Istituto di Ecologia e Idrologia Forestale. Pubblicazione ; 2
Altri autori (Persone)	Iovino, Francesco Pontecorvo, Gerardo
Disciplina	630.251 6
Locazione	FAGBC
Collocazione	60 630.251 6 CANV 1987
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910830655103321
Titolo	The solar system 2 : external satellites, small bodies, cosmochemistry, dynamics, exobiology / / Therese Encrenaz, James Lequeux
Pubbl/distr/stampa	London, England ; ; Hoboken, New Jersey : , : ISTE Limited : , : John Wiley & Sons, Incorporated, , [2021] ©2021
ISBN	1-119-88167-6 1-119-88169-2
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (368 pages)
Disciplina	523.2
Soggetti	Solar system Age
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover -- Half-Title Page -- Title Page -- Copyright Page -- Contents -- Preface -- 1. Satellites and Rings of the Giant Planets -- 1.1. Introduction -- 1.2. Jupiter's satellites -- 1.2.1. The Galilean satellites -- 1.2.2. The minor Jovian satellites -- 1.3. Saturn's satellites -- 1.3.1. Titan -- 1.3.2. Enceladus -- 1.3.3. The other icy satellites -- 1.3.4. Challenges for future missions in the Saturn system and Dragonfly -- 1.4. The satellites of Uranus and Neptune -- 1.4.1. The satellites of Uranus -- 1.4.2. The satellites of Neptune -- 1.4.3. Future exploration of the icy giant planets' systems -- 1.5. The rings -- 1.5.1. Tidal forces and the Roche limit -- 1.5.2. Flattening and ring dispersion -- 1.5.3. Jupiter's rings -- 1.5.4. Saturn's rings -- 1.5.5. Uranus's rings -- 1.5.6. Neptune's rings -- 1.5.7. The rings of small bodies -- 1.5.8. Ring dynamics -- 1.5.9. The origin of the rings -- 1.5.10. An exo-ring -- 1.6. References -- 2. Comets, Asteroids, and Dwarf Planets -- 2.1. Comets -- 2.1.1. Definition and nomenclature -- 2.1.2. The orbits and families of the comets -- 2.1.3. Cometary magnitude -- 2.1.4. Space exploration of the comets -- 2.1.5. The nucleus -- 2.1.6. The atmosphere -- 2.1.7. Dust and the tail -- 2.1.8. The chemical diversity of the comets: a relationship to their origins? -- 2.1.9. The interaction of comets with solar wind -- 2.2. The "historical" asteroids -- 2.2.1. The asteroids in the main belt -- 2.2.2. The asteroids that cross the

orbit of the terrestrial planets -- 2.2.3. The Trojan asteroids -- 2.2.4. The properties of asteroids -- 2.3. The "new" asteroids -- 2.3.1. The Centaurs -- 2.3.2. Trans-Neptunian objects -- 2.3.3. Interstellar objects -- 2.3.4. The origin and evolution of the asteroids -- 2.4. The dwarf planets -- 2.4.1. Ceres -- 2.4.2. Pluto and its satellites -- 2.4.3. Eris, Haumea, and Makemake.

2.5. References -- 3. Meteorites and Cosmochemistry -- 3.1. Rocks falling from the sky -- 3.2. Origin of meteorites -- 3.3. Planetary differentiation and groups of meteorites -- 3.4. Chondrites and the origin of the Solar System -- 3.4.1. The chemical composition of chondrites -- 3.4.2. The mineralogy of chondrites -- 3.4.3. The isotopic characteristics of bulk meteorites -- 3.5. Differentiated meteorites -- 3.5.1. Fragments of the asteroid Vesta -- 3.5.2. Iron meteorites -- 3.5.3. Pallasites -- 3.5.4. Fragments of the planet Mars -- 3.6. Witnesses to the formation and evolution of the Solar System -- 3.7. References -- 4. Formation and Dynamic History of the Solar System¹ -- 4.1. Introduction -- 4.2. Laws of motion of the planets and satellites -- 4.2.1. Kepler's laws -- 4.2.2. Gravity -- 4.2.3. Newton's fundamental laws of dynamics -- 4.2.4. The orbital elements -- 4.3. The two-body problem -- 4.4. The three-body problem -- 4.4.1. Jacobi constant and Lagrange points -- 4.4.2. Tadpole and horseshoe orbits -- 4.4.3. Hill sphere -- 4.5. Perturbations and resonances -- 4.6. Stability and chaos in the Solar System -- 4.7. Orbits in relation to a flattened body -- 4.8. Tidal effect -- 4.8.1. Tidal deformation -- 4.8.2. Tidal torque -- 4.8.3. Roche limit -- 4.9. Nongravitational forces and orbits of small bodies -- 4.9.1. Radiation pressure (micrometer-sized grains) -- 4.9.2. Poynting-Robertson effect (small macroscopic particles) -- 4.9.3. The Yarkovsky Effect (meter to kilometer-sized particles) -- 4.9.4. Yorp torque (asymmetric bodies) -- 4.9.5. Friction from solar particles (submicrometer dust) -- 4.9.6. Friction in gas -- 4.10. Formation of planetary systems -- 4.10.1. A disk of planetoids -- 4.10.2. Formation of terrestrial planets -- 4.10.3. Formation of Jupiter -- 4.10.4. Formation of giant planets by core accretion. 4.10.5. Formation by disk instability -- 4.10.6. Disappearance of the gas -- 4.10.7. Catastrophic collisions -- 4.10.8. Small bodies -- 4.10.9. Planetary migration -- 4.10.10. Fate of the small bodies -- 4.10.11. Exoplanetary formation -- 4.11. References -- 5. Origin of Life and Extraterrestrial Life -- 5.1. Definition of life -- 5.2. The appearance of life on Earth -- 5.2.1. Physicochemical conditions -- 5.2.2. The first forms of life -- 5.2.3. The formation of living cells -- 5.3. Life elsewhere in the Solar System -- 5.3.1. Mars -- 5.3.2. Venus -- 5.3.3. Satellites of the giant planets -- 5.4. How can life be detected on exoplanets? -- 5.5. Communicating with other civilizations? -- 5.6. References -- 6 Methods for Studying the Solar System -- 6.1. History -- 6.2. Observational techniques -- 6.2.1. Remote sensing -- 6.2.2. Methods of space exploration -- 6.2.3. Virtual Observatory and databases -- 6.2.4. Perspectives of ground-based and space observations -- 6.3. Computer simulations -- 6.3.1. Dynamics -- 6.3.2. Global climate models -- 6.4. References -- Appendix Web links -- Glossary -- List of Authors -- Index -- EULA.
