| Sommario/riassunto | This guide walks the reader step by step through the LEED 2009 for New Construction process, offering advanced techniques for estimating the actual costs, in time and money, for building green. It serves as an essential primer to price-assessment strategies for high-performance commercial and institutional projects, which include office buildings, high-rise residential buildings, government buildings, recreational facilities, manufacturing plants, and laboratories. Written by an author with more than twenty years of green construction experience on more than 80 LEED registered or certified projects. |
