

1. Record Nr.	UNINA9910830688303321
Titolo	Two-dimensional-materials-based membranes : preparation, characterization, and applications / / edited by Wanqin Jin and Gongping Liu
Pubbl/distr/stampa	Weinheim, Germany : , : Wiley-VCH, , [2022] ©2022
ISBN	3-527-82985-7 3-527-82983-0 3-527-82984-9
Descrizione fisica	1 online resource (397 pages)
Disciplina	620.115
Soggetti	Two-dimensional materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Includes index.
Nota di contenuto	Cover -- Title Page -- Copyright -- Contents -- Preface -- Chapter 1 Introduction -- References -- Chapter 2 Fabrication Methods for 2D Membranes -- 2.1 Introduction -- 2.2 Synthesis of Nanosheets -- 2.2.1 TopDown Method -- 2.2.1.1 MechanicalForce Exfoliation -- 2.2.1.2 IonIntercalation Exfoliation -- 2.2.1.3 OxidationAssisted Exfoliation -- 2.2.1.4 SelectiveEtching Method -- 2.2.2 BottomUp Method -- 2.2.2.1 Chemical Vapor Deposition -- 2.2.2.2 Hydro/Solvothermal Synthesis -- 2.2.2.3 Interfacial Synthesis -- 2.3 Membrane Structures and Fabrication Methods -- 2.3.1 Two DimensionalMaterial Nanosheet Membranes -- 2.3.1.1 Zeolite Membrane -- 2.3.1.2 MOF Membrane -- 2.3.1.3 Porous Graphene Membrane -- 2.3.2 TwoDimensionalMaterial Laminar Membranes -- 2.3.2.1 Assembly Strategies of Laminates -- 2.3.2.2 Nanostructure Controlling of Laminar Membranes -- 2.3.3 TwoDimensionalMaterials Based MixedMatrix Membranes (MMMs) -- 2.3.3.1 Fabrication Methods of MMMs -- 2.3.3.2 Effect of Physicochemical Properties of 2D Fillers -- 2.3.4 Other Hybrid Membranes -- 2.4 Summary and Outlook -- References -- Chapter 3 Nanoporous SingleLayer Graphene Membranes for Gas Separation -- 3.1 Introduction -- 3.2 Gas Separation Potential of NSLG Membranes -- 3.3 Engineering Gas

Selective Vacancy Defects -- 3.3.1 BottomUp Synthesis of NSLG -- 3.3.2 Postsynthetic Etching of SLG -- 3.3.2.1 Physical Etching Methods -- 3.3.2.2 Chemical Etching Techniques -- 3.4 Fabrication of Large Area NSLG Membranes -- 3.5 Summary and Outlook -- References -- Chapter 4 GrapheneBased Membranes for Water Separation -- 4.1 Introduction -- 4.2 Water Transport Mechanisms in GrapheneBased Membranes -- 4.2.1 InternalGeometryMediated Transport -- 4.2.1.1 Size Effects -- 4.2.1.2 Length Effects -- 4.2.2 SurfaceChemistry Mediated Transport -- 4.2.3 ExternalEnvironmentMediated Transport. 4.2.3.1 Solution Chemistry Effects -- 4.2.3.2 Applied Pressure Effects -- 4.2.3.3 Applied Potential Effects -- 4.2.4 GuestMaterialMediated Transport -- 4.2.4.1 Stabilizing Effects -- 4.2.4.2 SizeControlling Effects -- 4.2.4.3 SurfaceChemistryModifying Effects -- 4.2.4.4 Smart Gating Effects -- 4.3 Graphenebased Membrane Water Separation Applications -- 4.3.1 Nanofiltration -- 4.3.2 Reverse Osmosis -- 4.3.3 Forward Osmosis -- 4.4 Conclusions and Perspectives -- References -- Chapter 5 GrapheneBased Membranes for Ions Separation -- 5.1 Introduction -- 5.2 SingleLayer Graphene -- 5.2.1 Theoretical Calculations -- 5.2.2 Experimental Validations -- 5.3 Graphene Oxide Membranes -- 5.3.1 Structure of Graphene Oxide and Graphene Oxide Membranes -- 5.3.2 Ultrafast Water Permeability -- 5.3.3 Ion Selectivity -- 5.3.4 Microstructure Optimization for Desalination -- 5.3.5 Interlayer Spacing Control for Desalination -- 5.3.5.1 Cross Linking -- 5.3.5.2 Reduction -- 5.3.5.3 External Pressure -- 5.3.6 Charge Modification for Desalination -- 5.3.7 External Field Modulated Ion Transport -- 5.3.8 Ion Transport Through Planar GO Laminates -- 5.4 Summary and Perspective -- References -- Chapter 6 Graphene Based Membranes for Pervaporation -- 6.1 Introduction -- 6.2 Mass Transport Mechanism -- 6.2.1 Mass Transport in Pervaporation Process -- 6.2.2 Mass Transport in GO Membrane -- 6.3 Progresses in GO Membranes for Pervaporation -- 6.3.1 Controlling SelfAssembly Condition -- 6.3.2 Designing Graphene OxideFramework (GOF) Membrane -- 6.3.3 Assembly with Polymers -- 6.3.4 Intercalating Nanomaterials -- 6.3.5 Tuning Surface Structure -- 6.4 Summary and Perspective -- References -- Chapter 7 TwoDimensionalMaterials Membranes for Gas Separations -- 7.1 Introduction -- 7.2 2DMaterials Membranes -- 7.2.1 Zeolites -- 7.2.2 GrapheneBased Materials. 7.2.2.1 Nanoporous Graphene -- 7.2.2.2 Graphene Oxide -- 7.2.3 MOFs -- 7.2.4 COFs -- 7.2.5 gC₃N₄ -- 7.2.6 MXenes -- 7.2.7 Other 2D Materials -- 7.3 Preparation of 2D Nanosheets -- 7.3.1 TopDown Method -- 7.3.2 BottomUp Method -- 7.4 Preparation of 2DMaterials Membranes -- 7.4.1 TopDown Method -- 7.4.1.1 FiltrationAssisted Assembly -- 7.4.1.2 Coating -- 7.4.1.3 LayerbyLayer Assembly -- 7.4.2 BottomUp Method -- 7.5 Gas Separations -- 7.5.1 H₂/CO₂, H₂/N₂, and H₂/CH₄ Separations -- 7.5.2 CO₂/N₂ and CO₂/CH₄ Separations -- 7.5.3 Other Gas/Vapor Separations -- 7.6 Conclusions and Perspectives -- References -- Chapter 8 Layered Double Hydroxide Membranes for Versatile Separation Applications -- 8.1 Introduction on LDHs and LDHBased Membranes -- 8.2 Strategy for LDHBased Membrane Preparation -- 8.2.1 SolutionBased In Situ Growth -- 8.2.2 PostSynthetic Deposition -- 8.2.3 Blending with Polymers -- 8.3 Research Progress on LDHBased Membranes -- 8.3.1 Interlayer GalleryBased Separation -- 8.3.1.1 Pristine Interlayer GalleryBased Separation -- 8.3.1.2 Regenerated Interlayer GalleryBased Separation -- 8.3.2 Geometric ShapeBased Separation -- 8.3.2.1 Geometric ShapeBased Gas Separation -- 8.3.2.2 Geometric ShapeBased Liquid Separation -- 8.3.2.3 Geometric ShapeBased Particulate Matter Capture -- 8.3.2.4 Geometric ShapeBased Sacrificing Templates --

8.3.3 Unusual Thermal BehaviorBased Separation -- 8.3.4 Photocatalytic ActivityBased Separation -- 8.3.5 Positive Surface ChargeBased Separation -- 8.3.5.1 Positive Surface ChargeBased Ultrafiltration -- 8.3.5.2 Positive Surface ChargeBased Nanofiltration -- 8.3.5.3 Positive Surface ChargeBased Reverse Osmosis -- 8.3.5.4 Positive Surface ChargeBased Forward Osmosis -- 8.3.5.5 Positive Surface ChargeBased Nanocomposite Membranes -- 8.3.6 HydrophilicityBased Water Treatment.

8.3.6.1 HydrophilicityBased Microfiltration -- 8.3.6.2 Hydrophilicity Based Ultrafiltration -- 8.3.6.3 HydrophilicityBased Nanofiltration -- 8.3.6.4 HydrophilicityBased Reverse Osmosis -- 8.3.6.5 Hydrophilicity Based Forward Osmosis -- 8.4 Summary and Outlook -- References -- Chapter 9 MXene: A Novel TwoDimensional Membrane Material for Molecular Separation -- 9.1 Introduction -- 9.2 Synthesis and Processing -- 9.2.1 Synthesis of Multilayered MXene Phases -- 9.2.2 Fabrication of Single MXene Flakes -- 9.2.3 Surface Properties of MXene Flakes -- 9.2.4 Preparation of MXeneBased Membranes -- 9.2.4.1 DropCoating -- 9.2.4.2 Spraying or Spinning Coating -- 9.2.4.3 PressureAssisted Filtration -- 9.3 MXeneBased Membranes for Molecular Separation -- 9.3.1 Liquid Separation -- 9.3.1.1 Desalination -- 9.3.1.2 Organic Solvent Nanofiltration -- 9.3.1.3 Pervaporation Solvent Dehydration -- 9.3.1.4 Dyes and Natural Organic Matter Rejection -- 9.3.1.5 Oil-Water Separation -- 9.3.2 Gas Separation -- 9.4 Conclusions and Perspective -- References -- Chapter 10 2D Materials MixedMatrix Membranes -- 10.1 Introduction -- 10.2 Two Dimensional Materials as Dispersed Phase of MMMs -- 10.2.1 Graphene Oxide (GO) -- 10.2.1.1 Increasing Molecular Transport Channels -- 10.2.1.2 Reducing Nonselective Defects -- 10.2.1.3 Introducing the Functional Sites for Facilitated Transport -- 10.2.2 Metal-Organic Frameworks (MOFs) -- 10.2.2.1 Increasing Molecular Transport Channels -- 10.2.2.2 Enhancing the Interfacial Compatibility Between Nanomaterials and Polymers -- 10.2.3 Covalent Organic Frameworks (COFs) -- 10.2.3.1 Increasing Molecule Transport Channels -- 10.2.3.2 Introducing FacilelyTailored Functionality -- 10.2.3.3 Constructing Hierarchical Structures in MMMs -- 10.2.4 Other 2D Materials -- 10.2.4.1 TransitionMetal Dichalcogenides (TMDs). 10.2.4.2 Graphitic Carbon Nitride (gC₃N₄) -- 10.2.4.3 MXenes -- 10.3 TwoDimensional Material as Continuous Phase of MMMs -- 10.3.1 Graphene Oxide (GO) -- 10.3.1.1 Controlling Interlayer Spacing -- 10.3.1.2 Modulating the Physical/Chemical Microenvironment -- 10.3.2 Metal-Organic Framework (MOF) -- 10.3.2.1 Enhancing Processability and Stability of MOFs -- 10.3.2.2 Modulating the Physical/Chemical Microenvironment -- 10.3.3 Covalent Organic Frameworks (COFs) -- 10.3.3.1 Regulating the Physical/Chemical Microenvironment -- 10.3.3.2 Modulating Crystallinity, Porosity, Mechanical Properties -- 10.4 Conclusion and Outlook -- References -- Chapter 11 Transport Mechanism of 2D Membranes -- 11.1 Introduction -- 11.2 Fundamentals of Mass Transport Through Membranes -- 11.2.1 Transport Mechanism in Porous Membranes -- 11.2.2 Transport Mechanism in Nonporous Membranes -- 11.2.3 Transport Mechanism in Charged Membranes -- 11.2.4 Permeability-Selectivity TradeOff for Polymers -- 11.3 Nanofluidic Transport Through Confined Dimensions -- 11.3.1 Confinement Architectures for Artificial Nanofluidic Systems -- 11.3.2 Continuum Modeling of Nanofluidic Transport in Confined Channels -- 11.3.3 Mechanisms of Nanofluidic Transport in Atomically Thin Nanopores -- 11.3.4 Effects of Electrical Double Layer in Nanofluidic Ion Transport -- 11.3.5 Various Confinement Effects in Nanofluidic Transport at the Subnanometer Scale -- 11.3.5.1 Molecular

Rearrangement -- 11.3.5.2 Partial Dehydration or Desolvation --
11.3.5.3 Electrical Effects -- 11.3.5.4 Quantum Effects -- 11.4 Unique
MassTransport Properties in 2D Membranes: Structural Aspects --
11.4.1 Nanoporous Atomically Thin 2D Membranes (NATMs) -- 11.4.2
Stacked 2D Membranes with Laminar Structure -- 11.4.3 2D Materials
Embedded MixedMatrix Membranes (MMMs) -- 11.5 Summary and
Outlook -- References.
Chapter 12 Conclusions and Perspectives.
