

1. Record Nr.	UNINA9910830708403321
Autore	Prasad Arbind
Titolo	Advanced Materials and Manufacturing Techniques for Biomedical Applications
Pubbl/distr/stampa	Newark : , : John Wiley & Sons, Incorporated, , 2024 ©2023
ISBN	1-394-16696-6 1-394-16698-2 1-394-16697-4
Edizione	[1st ed.]
Descrizione fisica	1 online resource (458 pages)
Altri autori (Persone)	KumarAshwani GuptaManoj PrasadArbind
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Dedication Page -- Contents -- Preface -- Acknowledgement -- Section I: Advanced Materials for Biomedical Applications -- Chapter 1 Introduction to Next-Generation Materials for Biomedical Applications -- 1.1 Introduction -- 1.2 Advanced Functional Materials -- 1.3 Market and Requirement of Next-Generation Materials -- 1.4 Metals and Polymeric Biomaterials -- 1.5 Bioabsorbable Biomaterials -- 1.6 Processing of Bioabsorbable Polymeric Biomaterials -- 1.7 Application of Next-Generation Materials in Biomedical Applications -- 1.8 Latest Status of Next Generation Materials in Biomedical Applications -- 1.8.1 Bioabsorbable Devices for Bone Tissue Engineering -- 1.9 Bioresorbable Devices for Skin Tissue Engineering -- 1.10 Challenges and Perspectives -- 1.11 Conclusion -- References -- Chapter 2 Advanced Materials for Surgical Tools and Biomedical Implants -- 2.1 Introduction -- 2.2 Application of Bioengineering to Healthcare -- 2.3 Application in Musculoskeletal and Orthopedic Medicines -- 2.4 Application as a Disposable Medical Device -- 2.5 Application as an Implantable Biosensor -- 2.6 Conclusions -- References -- Chapter 3 Insights into Multifunctional

Smart Hydrogels in Wound Healing Applications -- 3.1 Introduction -- 3.2 Architecture of Fabricated Hydrogels -- 3.3 Bactericidal Effect on Wound Repair -- 3.3.1 Historical Perspective -- 3.3.2 Microbial Influence on Wound Healing -- 3.3.3 Wound Tissue Healing Strategies: Case Study -- 3.3.4 Degradation of Wound Healing Factors -- 3.3.5 pH and Wound Healing: Impact of Bacteria -- 3.4 New Frontiers of Hydrogels in Wound Dressing Applications -- 3.4.1 Hemostatic Hydrogel as Wound Dressing -- 3.4.2 Anti-Oxidant and Anti-Inflammatory Hydrogel Wound Dressing -- 3.4.3 Antibacterial Hydrogel Wound Healing -- 3.4.4 Self-Healing Hydrogel Wound Dressing. 3.4.5 Conductive Hydrogel Wound Dressing for Wound Monitoring -- 3.4.6 Chronic Wound Dressing -- 3.5 Conclusion and Future Perspectives -- References -- Chapter 4 Natural Resource-Based Nanobiomaterials: A Sustainable Material for Biomedical Applications -- 4.1 Introduction -- 4.2 Natural Resource-Based Biopolymer -- 4.2.1 Cellulose -- 4.2.2 Lignin -- 4.2.3 Starch -- 4.2.4 Chitosan -- 4.2.5 Silk -- 4.3 Extraction of Nature Resource-Based Nanomaterials -- 4.3.1 Extraction of Cellulose-Based Nanostructures -- 4.3.2 Extraction of Lignin-Based Nanostructures -- 4.3.3 Extraction of Starch-Based Nanostructures -- 4.3.4 Extraction of Chitosan-Based Nanostructures -- 4.3.5 Extraction of Silk Nanostructures -- 4.4 Biomedical Applications of Nature Resource-Based Nanomaterials and Their Nanobiocomposites -- 4.4.1 Nanocellulose in Biomedical Application -- 4.4.2 Nanolignin in Biomedical Application -- 4.4.3 Nanostarch in Biomedical Application -- 4.4.4 Nanochitosan in Biomedical Application -- 4.4.5 Nanosilk in Biomedical Application -- 4.5 Other Applications -- References -- Chapter 5 Biodegradable Magnesium Composites for Orthopedic Applications -- 5.1 Introduction -- 5.1.1 Biomaterials for Bone Implants -- 5.1.2 Magnesium: A Smart Material -- 5.1.3 Materials and Methods -- 5.1.4 Design Requirements for Mg-Based Composites -- 5.1.5 Types of Reinforcements -- 5.2 Materials and Methods -- 5.2.1 Powder Processing Route -- 5.2.2 Casting Route -- 5.3 Results and Discussion -- 5.3.1 Biodegradation Study -- 5.3.2 Biocompatibility -- 5.3.3 In Vivo Assessment of the Nanocomposites for Tissue Compatibility -- 5.4 Conclusion and Future Outlook -- References -- Chapter 6 New Frontiers of Bioinspired Polymer Nanocomposite for Biomedical Applications -- 6.1 Introduction -- 6.1.1 Polymers Used in Biomedical Applications -- 6.1.2 Graphene-Polymer Nanocomposites. 6.2 Methods to Prepare Graphene-Based Polymer Nanocomposites -- 6.3 Magnetic Material - Polymer Nanocomposites -- 6.3.1 Organization of Magnetic Polymer Nanocomposites -- 6.3.2 Residues and Suspensions -- 6.3.3 Tridimensional Solids -- 6.3.4 High-Permeability Materials for the Microwave -- 6.3.5 Piezoelectric Materials -- 6.3.6 Multifunctional Materials -- 6.3.6.1 Transparent Magnetic Materials -- 6.3.6.2 Luminescent Magnetic Materials -- 6.4 Nanostructured Composites -- 6.5 Conclusion and Future Trends -- References -- Chapter 7 Nanohydroxyapatite-Based Composite Materials and Processing -- 7.1 Introduction -- 7.2 Biomaterials -- 7.3 Types of Biomaterials -- 7.3.1 Polymers -- 7.3.2 Composites -- 7.4 Structure of Hydroxyapatite -- 7.5 Nanohydroxyapatite -- 7.5.1 Nanohydroxyapatite/Polymer Composite -- 7.5.2 Nanohydroxyapatite/Poly (Vinyl Alcohol) Composite -- 7.5.3 Nanohydroxyapatite/Sodium Alginate Composite -- 7.5.4 Nanohydroxyapatite/Chitosan Composite -- 7.5.5 Nanohydroxyapatite/Gelatin Composite -- 7.5.6 Nanohydroxyapatite/Chitosan-Gelatin Composite -- 7.5.7 Nanohydroxyapatite-Polylactic Acid Nanocomposites -- 7.6 Cancer Detection and Cell Imaging -- 7.6.1 Size and Morphology -- 7.7

Conclusion -- References -- Chapter 8 Self-Healing Materials and Hydrogel for Biomedical Application -- 8.1 Introduction -- 8.2 Self-Healing Hydrogels -- 8.3 Mechanism of Self-Healing in Hydrogels -- 8.3.1 Physically Cross-Linked Self-Healing Hydrogels -- 8.3.1.1 Hydrogen Bonding -- 8.3.1.2 Ionic Interactions -- 8.3.1.3 Host-Guest Interactions -- 8.3.1.4 Hydrophobic Interactions -- 8.3.2 Chemically Self-Healing Hydrogels -- 8.3.2.1 Imine Bond -- 8.3.2.2 Diel-Alder Reaction -- 8.3.2.3 Disulphide Bond -- 8.3.2.4 Boronate-Diol Complexation -- 8.4 Application of Self-Healing Hydrogel in Biomedical Application -- 8.4.1 Drug Delivery -- 8.4.2 Tissue Engineering Application.
8.4.2.1 Wound Healing -- 8.4.2.2 Neural Tissue Engineering -- 8.4.2.3 Bone Tissue Engineering -- 8.5 Conclusion and Future Prospects -- References -- Section II: Advanced Manufacturing Techniques for Biomedical Applications -- Chapter 9 Biomimetic and Bioinspired Composite Processing for Biomedical Applications -- 9.1 Introduction -- 9.2 Synthesis of Biomimetic and Bioinspired Composite -- 9.2.1 3D (Three-Dimensional) Printing -- 9.2.2 Synthesis of Bioinspired Nanomaterials -- 9.3 Biomaterials for Biomedical Applications -- 9.3.1 Biomaterials-Based Cell Therapy -- 9.3.2 Biomaterials for Cancer Diagnostics -- 9.3.3 Biomaterials for Vaccine Development -- 9.4 Bioinspired Materials -- 9.4.1 One-Dimensional Bioinspired Material -- 9.4.2 Two-Dimensional (2D) Bioinspired Materials -- 9.4.3 Three Dimensional (3D) Bioinspired Materials -- 9.5 Biomimetic Drug Delivery Systems -- 9.5.1 Cell Membrane-Based Drug Delivery System -- 9.5.2 Lipoprotein-Based Drug Delivery System -- 9.6 Artificial Organs -- 9.6.1 Artificial Kidney -- 9.6.2 Artificial Liver -- 9.6.3 Artificial Pancreas -- 9.6.4 Artificial Lung -- 9.7 Neuroprosthetics -- 9.7.1 Sensory Prosthetics -- 9.7.1.1 Auditory Prosthetics -- 9.7.1.2 Visual Prosthetics -- 9.7.2 Motor Prosthetics -- 9.7.3 Cognitive Prosthetics -- 9.8 Conclusion -- References -- Chapter 10 3D Printing in Drug Delivery and Healthcare -- 10.1 Introduction -- 10.2 3D Printing in Healthcare Technologies -- 10.3 Four Dimensions Printing (4D) -- 10.4 Transformation Process and Materials -- 10.4.1 3D Bioprinting -- 10.4.1.1 Biopinks -- 10.4.2 Bioceramics -- 10.4.3 Synthetic Biopolymers -- 10.5 3D Printing's Pharmaceutical Potentials -- 10.5.1 Personalization -- 10.5.2 Personalized Therapy -- 10.6 Drug Administration Routes -- 10.6.1 Transdermal Route -- 10.6.2 Ocular Route -- 10.6.3 Rectal and Vaginal Routes.
10.6.4 Pulmonary Drug Delivery -- 10.7 Custom Design 3D Printed Pharmaceuticals -- 10.8 Excipient Selection for 3D Printing Custom Designs -- 10.9 Customized Medicating of Drugs -- 10.10 Devices for Personalized Topical Treatment -- 10.10.1 Oral Solid Dosage Forms -- 10.10.2 Semisolid Extrusion (EXT) and Inkjet Printing -- 10.10.3 Stencil Printing -- 10.10.4 Implants -- 10.10.5 Tissue Engineering -- 10.10.6 Regenerative Medicine -- 10.10.7 Scaffoldings -- 10.10.8 Organ Printing -- 10.11 Conclusion -- References -- Chapter 11 3D Printing in Biomedical Applications: Techniques and Emerging Trends -- 11.1 Introduction -- 11.2 3D Printing Technologies -- 11.2.1 Digital Model -- 11.2.2 Inkjet-Based 3D Printing -- 11.2.3 Extrusion-Based 3D Printing -- 11.2.4 Laser-Based 3D Printing -- 11.2.5 Bioplotting -- 11.2.6 Fused Deposition Modeling (FDM) -- 11.3 Materials for 3D Printing -- 11.3.1 Hydrogel -- 11.3.2 Polymers (Melt Cured) -- 11.3.3 Metallic Substances -- 11.3.4 Ceramic Substances -- 11.3.5 Living Cells -- 11.4 Biomedical Applications: Recent Trends of 3D-Printing -- 11.4.1 Skin -- 11.4.2 Bone and Dentistry -- 11.4.3 Tissue -- 11.4.4 Drug Delivery -- 11.4.5 Other Applications -- 11.5 Challenges and Opportunities -- 11.6 Conclusion -- Acknowledgements -- References

-- Chapter 12 Self-Sustained Nanobiomaterials: Innovative Materials for Biomedical Applications -- 12.1 Introduction -- 12.1.1 Classification of Nanobiomaterials -- 12.1.2 Composition -- 12.1.3 Dimensionality -- 12.1.4 Morphology -- 12.2 Nanobiomaterials Applications -- 12.2.1 Drug Deliverance -- 12.2.2 Oncology -- 12.2.3 Diagnostics -- 12.2.4 Application in Tissue Engineering -- 12.2.5 Antifouling and Antimicrobial Nanobiomaterials -- 12.3 Challenge in the Clinical Rendition of Nanobiomaterials -- 12.3.1 Nanotoxicity -- 12.3.2 Regulatory Considerations -- 12.3.3 Commercialization. 12.4 Conclusion and Future Directions.
