

1. Record Nr.	UNINA9910830731303321
Titolo	Thermodynamics of heat engines / / coordinated by Bernard Desmet
Pubbl/distr/stampa	Hoboken : , : ISTE Ltd : , : John Wiley and Sons Inc, , [2022] ©2022
ISBN	1-394-18819-6 1-394-18817-X
Descrizione fisica	1 online resource (258 pages)
Disciplina	621.4021
Soggetti	Heat-engines - Thermodynamics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Title Page -- Copyright Page -- Contents -- Foreword -- Preface -- Chapter 1. Energy Conversion: Thermodynamic Basics -- 1.1. Introduction -- 1.2. Principles of thermodynamics -- 1.2.1. Notion of a thermodynamic system -- 1.2.2. First law -- 1.2.3. Second law: mechanism of mechanical energy degradation in a heat engine -- 1.3. Thermodynamics of gases -- 1.3.1. Equations of state -- 1.3.2. Calorimetric coefficients -- 1.3.3. Ideal gas -- 1.3.4. Van der Waals gas -- 1.4. Conclusion -- 1.5. References -- Chapter 2. Internal Combustion Engines -- 2.1. Generalities - Operating principles -- 2.1.1. Introduction -- 2.1.2. Spark-ignition engines -- 2.1.3. Compression ignition engine -- 2.1.4. Expression of useful work -- 2.2. Theoretical air cycles -- 2.2.1. Hypotheses -- 2.2.2. Beau de Rochas cycle (Otto cycle) -- 2.2.3. Miller-Atkinson cycle -- 2.2.4. Diesel cycle -- 2.2.5. The limited pressure cycle (mixed cycle) -- 2.2.6. Comparison of theoretical air cycles -- 2.3. Influences of the thermophysical properties of the working fluid on the theoretical cycles -- 2.3.1. Thermophysical properties of the working fluid -- 2.3.2. Reversible adiabatic transformations -- 2.3.3. Mixed cycle for ideal and semi-ideal gases -- 2.4. Zero-dimensional thermodynamic models -- 2.4.1. Hypotheses -- 2.4.2. Single-zone model -- 2.4.3. Flow through the valves -- 2.4.4. Heat transfer with the cylinder walls -- 2.4.5. Combustion heat generation model -- 2.4.6. Two-zone model -- 2.5.

Supercharging of internal combustion engines -- 2.5.1. Basic principles of supercharging -- 2.5.2. Supercharging by a driven compressor -- 2.5.3. Turbocharging -- 2.6. Conclusions and perspectives -- 2.7. References -- Chapter 3. Aeronautical and Space Propulsion -- 3.1. History and development of aeronautical means of propulsion. 3.2. Presentation of the aircraft system and its propulsive unit -- 3.2.1. Classification and presentation of the usual architectures of aeronautical engines and their specific uses -- 3.2.2. Study of the forces applied on the aircraft system during steady flight -- 3.2.3. Definition of the propulsion forces and specific quantities of the propulsion system -- 3.3. Operating cycle analysis -- 3.3.1. Hypotheses and limits of validity -- 3.3.2. Presentation of engine stations (SAE ARP 755 STANDARD) -- 3.3.3. Study of thermodynamic transformations and their representations in T-s diagrams -- 3.3.4. Study of the thermodynamic cycles for a gas turbine -- 3.3.5. Study of the thermodynamic cycle of a gas turbine, branch by branch -- 3.3.6. Improvements to the Joule-Brayton cycle -- 3.3.7. Thermodynamic improvements for a gas turbine using energy regeneration -- 3.3.8. Thermodynamic improvements for a gas turbine using staged compression and expansion -- 3.4. The actual engine -- 3.4.1. Development cycle of the turbomachine (turbojet) -- 3.4.2. Technical disciplines in development -- 3.4.3. Some specific problems of each module -- 3.4.4. Secondary air system design methods -- 3.4.5. T4 and the secondary air system -- 3.5. Perspectives -- 3.6. References -- Chapter 4. Combustion and Conversion of Energy -- 4.1. Generalities -- 4.1.1. Introduction -- 4.1.2. Premixed flame -- 4.1.3. Diffusion flame -- 4.1.4. Stabilization of a flame -- 4.1.5. Flammability of air-fuel mixtures -- 4.1.6. Combustion in internal combustion engines -- 4.2. Theoretical combustion reactions -- 4.2.1. Constituents of the combustible mixture -- 4.2.2. Combustion stoichiometry -- 4.2.3. Theoretical combustion of a lean mixture -- 4.2.4. Theoretical combustion of a rich mixture -- 4.3. Energy study of combustion -- 4.3.1. Combustion at constant volume. 4.3.2. Combustion at constant pressure -- 4.3.3. Relations between heating values -- 4.3.4. Adiabatic flame and explosion temperatures -- 4.4. Chemical kinetics of combustion -- 4.4.1. Chain reactions -- 4.4.2. Composition of a reactive mixture -- 4.4.3. Reaction rates -- 4.4.4. Establishing a chemical equilibrium -- 4.4.5. Equilibrium composition of the combustion products -- 4.4.6. Detailed chemical kinetics-formation of pollutants -- 4.5. Exergy analysis of combustion -- 4.5.1. Exergy of a gas mixture -- 4.5.2. Exergy production from a combustion reaction -- 4.5.3. Exergy of a fuel -- 4.6. Conclusion -- 4.7. References -- Chapter 5. Engines with an External Heat Supply -- 5.1. Introduction -- 5.2. The Stirling engine -- 5.2.1. Theoretical cycle -- 5.2.2. Characteristics of the Stirling engine -- 5.3. The Ericsson engine -- 5.3.1. Operating principles -- 5.3.2. Theoretical cycles -- 5.3.3. Improvements of the Ericsson engine -- 5.4. Perspectives -- 5.4.1. Advantages and disadvantages of Stirling and Ericsson engines -- 5.4.2. Perspectives of evolution of external combustion machines in the new decarbonized energy landscape -- 5.5. References -- Chapter 6. Energy Recovery - Waste Heat Recovery -- 6.1. Waste energy recovery -- 6.1.1. Energy balance of an internal combustion engine -- 6.1.2. Degradation of mechanizable energy into uncompensated heat -- 6.1.3. Exergy balance in internal combustion engines -- 6.1.4. Concept of energy recovery -- 6.2. Cogeneration in industrial facilities -- 6.2.1. Cogenerating gas turbines -- 6.2.2. Cogenerating diesel engine -- 6.2.3. Comparative cogeneration efficiencies -- 6.2.4. Complex depressurized cycle -- 6.2.5. Complex over-expansion cycle -- 6.2.6.

Conclusion -- 6.3. Micro-cogeneration -- 6.3.1. Introduction -- 6.3.2.
Classification -- 6.3.3. Internal combustion engines -- 6.3.4. Gas
micro-turbines.
6.3.5. Fuel cells -- 6.3.6. Thermoelectricity -- 6.3.7. Thermoacoustics
-- 6.3.8. "Rankinized" cycles -- 6.4. Conclusion -- 6.5. Perspectives --
6.6. References -- List of Authors -- Index -- EULA.
