

1. Record Nr.	UNINA9910830773303321
Autore	Webber Robert (Executive)
Titolo	Unlocking Agile's missed potential / / Robert Webber
Pubbl/distr/stampa	Hoboken, New Jersey : , : IEEE Computer Society : , : IEEE Press : , : Wiley, , [2022] ©2022
ISBN	1-119-84911-X 1-119-84909-8
Descrizione fisica	1 online resource (291 pages)
Disciplina	005.1112
Soggetti	Agile software development
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	"This book makes the case that the potential of Agile development in software product management was lost because feature-based Waterfall planning forces engineering into so-called "hybrid" approaches that don't support basic tenets of Agile development. A new Agile planning process based on value flow optimization can unleash Agile, taking companies into a new era of business agility and financial predictability. The author introduces a practical way to unify Agile practices across the product development life cycle, from ideation through deployment. This holistic perspective facilitates collaboration and teamwork among product management, engineering, and project management to finally realize the promises of Agile development."--
