

1. Record Nr.	UNINA9910830778303321
Titolo	Evaluating theories of language [[electronic resource] ] : evidence from disordered communication // edited by Barbara Dodd, Ruth Campbell and Linda Worrall
Pubbl/distr/stampa	London, : Whurr Publishers, 1996
ISBN	1-282-37944-5 9786612379444 0-470-69913-2 0-470-69855-1
Descrizione fisica	1 online resource (220 p.)
Altri autori (Persone)	DoddBarbara CampbellRuth WorrallLinda
Disciplina	616.855
Soggetti	Communicative disorders Language acquisition
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Evaluating Theories of Language: Evidence from Disordered Communication; Contents; Preface; Acknowledgements; Contributors; Introduction Words and nature; Chapter 1 Computational cognitive neuropsychology and acquired dyslexia; Chapter 2 From snarks to boojums: why are prosodic disabilities so rare?; Chapter 3 Underlying representations in the acquisition of phonology: evidence from 'before and after' speech; Chapter 4 Insights into language structure and function: some consequences of prelingual hearing loss Chapter 5 Individual differences in cognitive function among normal subjects and their implications for cognitive neuropsychologyChapter 6 Symptoms of disorder without impairment: the written and spoken errors of bilinguals; Chapter 7 The role of subcortical structures in language: clinico-neuroradiological studies of brain-damaged subjects; Chapter 8 Cognitive neuropsychology and aphasia: a critical analysis; Chapter 9 Limitations of models of sentence production: evidence from Cantonese data of normal and aphasic speakers; Synthesis; Index

## Sommario/riassunto

One approach to the study of language has been to describe people whose ability to communicate is impaired. Some researchers have argued that it is possible to identify the component mental processes that contribute to the ability to communicate by describing the ways in which language can break down. Other researchers have expressed doubts about the extent to which data from impairment reflects normal language function. This volume reflects the problems of constructing theory of how the normal brain deals with language from data from impaired individuals from the perspective of a range of d
