| Sommario/riassunto | "This unique book packs a wealth of practical information on the laboratory diagnosis of haemoglobin disorders into a compact and approachable format. Written by Barbara Bain, a leading haematologist with a reputation for her educational prowess, this book provides a concise overview of the diseases and focuses on the selection, performance, and interpretation of the results of tests that should be offered by all but the very specialist referral centers. Where more specialist tests are required, the reader is given an overview of what the specialist center will do, with guidance on what the result will imply. Haemoglobinopathies are common, and correct interpretation of results - and consequently diagnosis - is vital for effective patient management. This book provides clear guidance of a complex topic. The essential reference volume for the haematology laboratory. Presents a practical, highly illustrated, approach to the laboratory diagnosis of haemoglobin disorders. Each chapter includes test yourself questions, an indispensable tool for learning or teaching. Includes self-assessment case studies at the end of the book, ideal for the trainee or for CPD"-- |
