

1. Record Nr.	UNINA9910830782703321
Titolo	Drug targeting : organ-specific strategies
Pubbl/distr/stampa	[Place of publication not identified], : Wiley VCH, 2001
ISBN	1-280-64441-9 9786610644414 3-527-60006-X
Descrizione fisica	1 online resource (406 pages)
Collana	Methods and principles in medicinal chemistry Drug targeting
Disciplina	615/.7
Soggetti	Drug targeting Drug Delivery Systems Drug Therapy Therapeutics Analytical, Diagnostic and Therapeutic Techniques and Equipment Pharmacy, Therapeutics, & Pharmacology Health & Biological Sciences
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	How are medicines transported intact through the body to their specific target sites without triggering side effects? The answer is "Drug Targeting". This thoroughly application--oriented book gives comprehensive answers to this and many other questions that confront scientists daily in chemical, pharmaceutical and medical research. A concise overview of the most important basic theories, modern forms of therapy and molecular biological tools, it represents a comprehensible introduction to the topic. The book then goes on to deal with strategies for target applications, divided according to target site, for example brain, lungs, liver, blood vessels and tumor cells. The third part is devoted to special, modern techniques, from phage display methods, via the use of tissue slices right up to pharmacokinetic modeling. Throughout, the focus remains on the practical aspect and successful application of the method in question, although a glance at

what the future holds is also included. A volume that every pharmaceutically oriented research group should own.
