

1. Record Nr.	UNINA9910830814203321
Autore	Turner Bryan M
Titolo	Chromatin and gene regulation [[electronic resource]] : mechanisms in epigenetics / / Bryan M. Turner
Pubbl/distr/stampa	Oxford ; ; Malden, MA, : Blackwell Science, 2001
ISBN	1-281-32244-X 9786611322441 0-470-75062-6 0-470-75167-3
Descrizione fisica	1 online resource (298 p.)
Disciplina	572.865
Soggetti	Chromatin Genetic regulation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chromatin and Gene Regulation; Contents; Preface; Prologue; Chapter 1 Controlling Transcription: Shared Aims and Common Mechanisms; Introduction; Some general principles; Transcription in prokaryotes; Genetic switches in bacteria; Chapter 2 Transcription in Eukaryotes: The Problems of Complexity; Introduction; The emergence of eukaryotes; The transcription machinery in eukaryotes; General transcription factors, TAFs and the PolII pre-initiation complex; Transcription by PolI and PolIII; The elongation stage; Experimental considerations; Large genome problems: why are things so complicated? Chapter 3 The Nucleosome: Chromatin's Structural UnitIntroduction; Exploring how DNA is packaged in the nucleus; The structure of the nucleosome; Chapter 4 Histone Tails: Modifications and Epigenetic Information; Introduction; The histone tails; Histone modifications; Histone variants; Chapter 5 Higher-Order Chromatin Structures and Nuclear Organization; Introduction; The 30 nm fibre; DNA loops; The nuclear matrix and chromosome scaffolds; Scaffold/matrix associated regions (SARs and MARs); Chromosome bands and functional domains; Nuclear domains and structure in the interphase nucleus Chapter 6 Transcription in a Chromatin EnvironmentIntroduction;

Genes are packaged into nucleosomes, even when they are being transcribed; Genetic experiments in yeast show the importance of histones for gene regulation; Changes in chromatin structure precede gene activation; Increased histone acetylation can precede or accompany the onset of transcription; DNaseI hypersensitive sites; Nucleosome positioning in vitro and in vivo; Chromatin domains; Chapter 7 How the Transcription Machinery Deals with Chromatin; Introduction; In vitro studies of transcription factor binding A crowded nucleosome: Mouse Mammary Tumour Virus nucleosome BThe opportunities presented by DNA replication; Chromatin and the elongation stage of transcription; Chapter 8 Chromatin Remodelling Machines; Introduction; Nucleosome remodelling enzymes; Histone acetyltransferases (HATs); Histone deacetylases; The nuclear receptors; Chromatin and cancer; Chapter 9 Heterochromatin; Introduction; and heterochromatin in Drosophila; Facultative and constitutive heterochromatin; Heterochromatin DNA; Heterochromatin genes; Heterochromatin proteins; Position effect variegation Heterochromatin and gene expression in mammalsChapter 10 Long-term Silencing of Gene Expression; Introduction; DNA methylation; Silencing at telomeres and mating type loci in yeast; Chapter 11 Cellular Memory and Imprinting; Introduction; Maintenance of transcriptional states; Imprinted genes; Chapter 12 Mechanisms of Dosage Compensation; Introduction; Methods of sex determination; Dosage compensation in mammals; Dosage compensation in Drosophila; Dosage compensation in C. elegans; Lessons from dosage compensation; Index

Sommario/riassunto

Written in an informal and accessible style, Chromatin and Gene Regulation enables the reader to understand the science of this rapidly moving field. Chromatin is a fundamental component in the network of controls that regulates gene expression. Many human diseases have been linked to disruption of these control processes by genetic or environmental factors, and unravelling the mechanisms by which they operate is one of the most exciting and rapidly developing areas of modern biology. Chromatin is central both to the rapid changes in gene transcription by which cells respond to changes
