Sommario/riassunto

"Frontiers in Sustainable Cities aims to develop a multi-disciplinary academic approach to life in contemporary and future urban environments. The journal publishes rigorously peer-reviewed, cutting-edge research on a broad range of topics, from engineering and urban studies to social sciences, with a focus on achieving sustainable living processes within future urban landscapes (in line with SDGs). To achieve resilience, environmental health, people's inclusion, equality and healthy living in the face of the severe economical and environmental challenges facing the world today, international collaboration across all disciplines is required, including aspects on energy engineering, human geography and economics, architecture, governance and political science, public health, natural and behavioural science."
