

1. Record Nr.	UNINA9910830967703321
Titolo	Supramolecular nanotechnology . Volume 3. : advanced design of self-assembled functional materials / / edited by Omar Azzaroni and Martin Conda-Sheridan
Pubbl/distr/stampa	Weinheim, Germany : , : WILEY-VCH GmbH, , [2023] ©2023
ISBN	3-527-83404-4 3-527-83403-6
Descrizione fisica	1 online resource (1343 pages)
Disciplina	620.5
Soggetti	Nanotechnology Organic electronics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover -- Volume 1 -- Title Page -- Copyright -- Contents -- Preface -- Foreword -- Chapter 1 Complex Helical SelfOrganizations and Functions on All Length Scales. From Art, Architecture, Early Machines and Natural Phenomena to Biological and Synthetic Assemblies and Macromolecules -- 1.1 Definition of SelfOrganizations and Complex Systems -- 1.1.1 Early Examples of Helical SelfOrganizations in Art, Architecture, Early Machines, and Natural Phenomena -- 1.1.2 Examples of Helical SelfOrganizations of Natural Phenomena. Tornado's Spiral or Vortex, Hurricanes, Typhoons, Tropical Cyclones, Whirlpool, and Aurora Borealis -- 1.1.3 Early Examples of Helical Machines: Leonardo's Aerial Screw and Archimedes Water Screw -- 1.2 Helical Assemblies in Biology -- 1.2.1 The Pauling-Corey Hydrogen Bonded Helix of Proteins and the Failure of RibbonLike Model of Bamford, Bragg, Kendrew, and Perutz -- 1.2.2 The CoiledCoil Structure of Proteins by Pauling and Crick -- 1.2.3 The Structure of Globular Proteins Hemoglobin and Myoglobin is SelfOrganized from Helices -- 1.2.4 The Story of the Discovery of the DNA Double Helix -- 1.2.5 The Structure and the Mechanism of SelfOrganization of Tobacco Mosaic Virus (TMV) -- 1.3 Biology Leading the Way to Synthetic Helical Macromolecules and Their SelfOrganizations -- 1.3.1

Polytetrafluoroethylene, Polyacetylenes, Poly(isocyanide)s, and Poly(carbodiimide)s -- 1.3.2 Helical SelfOrganizable Dendronized Covalent and Supramolecular Macromolecules -- 1.3.2.1 Helical Self Organization Mediated by Ionic Interactions Provide High Ionic Conductivity -- 1.3.2.2 Bundles of Helical Supramolecular Columns SelfOrganize into Helical Superlattices -- 1.3.2.3 Helical Self Organizations Mediated by Donor-Acceptor Interactions Generate Self Repairing Electronic Systems.

1.3.2.4 Transforming Irreversible Intramolecular Electrocyclization Accompanied by Chain Cleavage of CisPPA into Thermally Reversible Cis-Cisoidal to Cis-Transoidal Isomerization of Helical Dendronized PPA Induces a New Helix-Helix Transition and a General Methodology to Design Molecular Machines -- 1.3.2.5 Helical SelfOrganization of Homochiral Dendritic Dipeptides Provides Access to the First Synthetic AquaporinLike (AQP) Channel for Water Transport -- 1.3.2.6 Programming Supramolecular Helical Polymerization of Dendritic Dipeptides with all Stereochemical Permutations of the Dipeptide Provides a Rational for Biological Homochirality -- 1.3.2.7 The Transplant of Quasiequivalency from the SelfAssembly of Icosahedral Viruses to the SelfAssembly of Dendrons and Dendronized Polymers Inspired SelfOrganization of Helical Monodisperse Spheres, Quasicrystals, and Frank-Kasper Phases -- 1.3.3 SelfInterrupted Synthesis (SIS), SelfInterrupted Polymerization (SIP), SelfAccelerated Polymerization (SAP), and SelfInterrupted Living Polymerization (SILP) -- 1.3.3.1 SelfOrganization of Constitutional Isomeric Dendritic Dipeptides Yields Hollow Columns and Hollow Spheres -- 1.3.4 The Transplant of Helical Diffraction Theory from Biology to Self Organizable Dendronized Supramolecular and Covalent Polymers and its Implications on Supramolecular Dendrimers -- 1.3.4.1 HatShaped Dendrimers Deracemize in Their Helical Hexagonal Crystal State Producing Isotactic Supramolecular Polymers from Atactic Polymers -- 1.3.4.2 The Cogwheel Mechanism of Helical SelfOrganization and Deracemization in the Crystal State -- 1.3.5 Arrangements of Helical Columns Exceeding the Complexity of Biological CoiledCoils by Supramolecular Orientational Memory Effect.

1.4 From Amphiphilic Janus Dendrimers, Amphiphilic Janus Glycodendrimers, and OneComponent Multifunctional Sequence Defined Ionizable Amphiphilic Janus Dendrimers to Targeted Delivery of mRNA -- 1.4.1 Amphiphilic Janus Dendrimers -- 1.4.1.1 Amphiphilic Janus Glycodendrimers and Their SelfAssembly into Glycodendrimersomes -- 1.4.1.2 Janus Dendrimers and Glycodendrimers Coassemble with Bacterial and Human Cells into Hybrid Cells -- 1.4.1.3 Endocytosis of Living Bacteria by Janus DendrimersDerived Dendrimersomes -- 1.4.1.4 Disassembly of Dendrimersomes into Janus Dendrimers and ReAssembly of into Dendrimersomes -- 1.4.1.5 Encapsulation of Hydrophobic Components in Dendrimersomes and Decoration of Their Surface with Proteins and Nucleic Acids -- 1.4.1.6 OneComponent Multifunctional Sequence Defined Ionizable Amphiphilic Janus Dendrimers (IAJDs) for the Delivery of mRNA -- 1.4.1.7 The Unexpected Importance of the Primary Structure of the Hydrophobic Part of OneComponent Ionizable Amphiphilic Janus Dendrimers in Targeted mRNA Delivery Activity -- 1.4.1.8 SelfAssembly of Amphiphilic Janus Dendrimers into OnionLike Dendrimersomes -- 1.4.2 Synthesis of Dendrimers and Janus Dendrimers by Thio-Bromo Click -- 1.5 Will Synthetic Chemistry Ever Equal or Even Exceed the Complexity and Precision of Nanoarchitectures from Biology? -- Acknowledgment -- References -- Chapter 2 Recent Advances in Porphyrin and Phthalocyaninebased 2D

MOFs and 2DCOFs for Energy Applications -- 2.1 Introduction -- 2.2 Synthesis -- 2.2.1 Porphyrin/Phthalocyanine Derivatives in MOFs Systems -- 2.2.2 Porphyrin/Phthalocyanine Derivatives in COFs Systems -- 2.2.3 General Synthesis Strategies of 2DMOFs and 2DCOFs -- 2.3 Basics of Watersplitting and Supercapacitor Devices -- 2.3.1 Watersplitting -- 2.3.2 Types of Energy Storage Electrode Materials. 2.4 2DMOF and 2DCOFbased Catalysts for Watersplitting -- 2.4.1 HER Catalysts Based on Porphyrin and Phthalocyanine 2DMOFs/2DCOFs -- 2.4.2 Porphyrin and Phthalocyanine Based 2DMOFs/2DCOFs for OER -- 2.5 2DMOFs/2DCOFs for Supercapacitors -- 2.6 Summary and Outlook -- References -- Chapter 3 Controlled Supramolecular Selfassembly in MOF Confined Spaces -- 3.1 Introduction -- 3.1.1 Encapsulation of Functional Molecules within MOFs -- 3.2 MOFDriven Selfassembly of Supramolecular Assemblies -- 3.2.1 Design, Synthesis and Functionality of the MOF Nanoreactors -- 3.2.2 Synthesis of Supramolecular Assemblies -- 3.2.2.1 Subnanometer Metal Clusters and SACs -- 3.2.2.2 Organic Polymers -- 3.2.2.3 Supramolecular Coordination Compounds (SCCs) -- 3.3 Perspectives: Potential Unique Applications of Supramolecular Assemblies within MOFs -- 3.3.1 Enzymatic Catalysis -- 3.3.2 Environmental Remediation -- 3.4 Conclusion -- Acknowledgments -- References -- Chapter 4 Supramolecular Materials from Porphyrins and Phthalocyanines -- 4.1 Introduction -- 4.2 Assembly by Host-Guest Interactions -- 4.3 Assembly by Balancing Opposing Interactions -- 4.3.1 Liquid Crystalline Phthalocyanines -- 4.3.2 Supramolecular Polymers -- 4.4 Assembly Using Chirality as a Tool -- 4.5 Directed SelfAssembly -- 4.6 Outlook -- Acknowledgments -- References -- Chapter 5 Molecular Design and Excited State Engineering for Supramolecular H₂ Evolution Catalysts -- 5.1 Introduction -- 5.2 Restricted Exciton Lifetime - Enhanced Aggregation -- 5.2.1 SelfAssembled Photocatalysts Consisting of Perylene Monoimide (PMI) -- 5.2.2 Self Assembled Photocatalysts Consisting of Perylene Diimide (PDI) -- 5.2.3 SelfAssembled Photocatalysts Based on Zinc Porphyrin Derivatives -- 5.3 Prolonged Exciton Lifetime - Enhanced Intersystem Crossing Through Salt Addition. 5.3.1 Prolonged Exciton Lifetime - Enhanced Triplet Formation by Iodide Addition -- 5.3.2 Prolonged Exciton Lifetime - Octupolar Building Block for Seawater Splitting -- 5.4 Outlook -- References -- Chapter 6 Constitutional and Configurational Isomerism within Peptide/-Electron SelfAssembling Molecules and Their Impacts on Supramolecular Nanostructures -- 6.1 Introduction -- 6.1.1 Constitutional Isomerism -- 6.1.2 Configurational Isomers -- 6.2 Conclusion -- References -- Chapter 7 Selfassembly Templated by Radical-Radical Interactions -- 7.1 Introduction -- 7.2 Background -- 7.2.1 History of Organic Radicals -- 7.2.2 Supramolecular Stabilization of Radical Dimers -- 7.2.3 Molecular Stabilization of Radical Dimers -- 7.3 Applications -- 7.3.1 Supramolecular Polymer Construction -- 7.3.2 Other Applications -- 7.4 Conclusion -- References -- Chapter 8 Molecular Engineering of BioAssemblies: Prospects and Design Rules for Sustainable, Wearable Electromechanical Materials -- 8.1 Introduction: Biological SelfAssembly -- 8.2 Piezoelectricity: Functional SelfAssembly -- 8.2.1 Basic Building Blocks: Amino Acids -- 8.2.2 Peptide Crystals and Nanostructures -- 8.2.2.1 SelfAssembled Monolayers as Novel Piezoelectrics -- 8.2.2.2 Diphenylalanine as a Key Piezoelectric Peptide Motif -- 8.2.3 Piezoelectric Protein Assemblies -- 8.3 Conclusions and Outlook -- References -- Chapter 9 Supramolecular Interfacial Nanoarchitectonics -- 9.1 Introduction: The Importance of Supramolecular Chemistry at the Interface from the

Perspective of the Secrets of Living Organisms -- 9.2 Molecular Recognition at the Interface -- 9.3 Nanoarchitectonics Fabrication at Interfaces -- 9.4 New Role of Interfaces: Connecting the Nano and Macro -- 9.5 New Developments in Molecular Recognition.
9.6 Conclusion: Can We Say that the Function of Organic Molecules Has Been Sufficiently Investigated?.
