

1. Record Nr.	UNINA9910830999203321
Autore	Epperson James F.
Titolo	Solutions manual to accompany an introduction to numerical methods and analysis // James Epperson
Pubbl/distr/stampa	Hoboken, New Jersey : , : Wiley, , [2021] ©2021
ISBN	1-119-60459-1 1-119-60458-3 1-119-60457-5
Edizione	[Third edition.]
Descrizione fisica	1 online resource (297 pages)
Disciplina	519.4
Soggetti	Numerical analysis
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	<p><P>1 Introductory Concepts and Calculus Review 1</p> <p>1.1 Basic Tools of Calculus 1</p> <p>1.2 Error, Approximate Equality, and Asymptotic Order Notation 10</p> <p>1.3 A Primer on Computer Arithmetic 13</p> <p>1.4 A Word on Computer Languages and Software 17</p> <p>1.5 A Brief History of Scientific Computing 18</p> <p>2 A Survey of Simple Methods and Tools 19</p> <p>2.1 Horner's Rule and Nested Multiplication 19</p> <p>2.2 Difference Approximations to the Derivative 22</p> <p>2.3 Application: Euler's Method for Initial Value Problems 30</p> <p>2.4 Linear Interpolation 34</p> <p>2.5 Application-The Trapezoid Rule 38</p> <p>2.6 Solution of Tridiagonal Linear Systems 46</p> <p>2.7 Application: Simple Two-Point Boundary Value Problems 50</p> <p>3 Root-Finding 55</p> <p>3.1 The Bisection Method 55</p> <p>3.2 Newton's Method: Derivation and Examples 59</p> <p>3.3 How to Stop Newton's Method 63</p> <p>3.4 Application: Division Using Newton's Method 66</p> <p>3.5 The Newton Error Formula 69</p> <p>3.6 Newton's Method: Theory and Convergence 72</p> <p>3.7 Application: Computation of the Square Root 76</p> <p>3.8 The Secant Method: Derivation and Examples 79</p> <p>3.9 Fixed Point Iteration 83</p> <p>3.10 Roots of Polynomials (Part 1) 85</p> <p>3.11 Special Topics in Root-finding Methods 88</p></p>

<p>3.12 Very High-order Methods and the Efficiency Index 98</p>
<p>4 Interpolation and Approximation 101</p> <p>4.1
Lagrange Interpolation 101</p> <p>4.2 Newton Interpolation and
Divided Differences 104</p> <p>4.3 Interpolation Error 114</p>
<p>4.4 Application: Muller's Method and Inverse Quadratic
Interpolation 119</p> <p>4.5 Application: More Approximations to
the Derivative 121</p> <p>4.6 Hermite Interpolation 122</p> <p>4.
7 Piecewise Polynomial Interpolation 125</p> <p>4.8 An Introduction
to Splines 129</p> <p>4.9 Tension Splines 135</p> <p>4.10 Least
Squares Concepts in Approximation 137</p> <p>4.11 Advanced
Topics in Interpolation Error 142</p> <p>5 Numerical Integration
149</p> <p>5.1 A Review of the Definite Integral 149</p>
<p>5.2 Improving the Trapezoid Rule 151</p> <p>5.3 Simpson's
Rule and Degree of Precision 154</p> <p>5.4 The Midpoint Rule
162</p> <p>5.5 Application: Stirling's Formula 166</p> <p>5.6
Gaussian Quadrature 167</p> <p>5.7 Extrapolation Methods
173</p> <p>5.8 Special Topics in Numerical Integration 177</p>
<p>6 Numerical Methods for Ordinary Differential Equations
185</p> <p>6.1 The Initial Value Problem-Background
185</p> <p>6.2 Euler's Method 187</p> <p>6.3 Analysis of Euler's
Method 189</p> <p>6.4 Variants of Euler's Method 190</p> <p>6.5
Single Step Methods-Runge-Kutta 197</p> <p>6.6 Multistep Methods
200</p> <p>6.7 Stability Issues 204</p> <p>6.8 Application to
Systems of Equations 206</p> <p>6.9 Adaptive Solvers 210</p>
<p>6.10 Boundary Value Problems 212</p> <p>7 Numerical
Methods for the Solution of Systems of Equations 217</p>
<p>7.1 Linear Algebra Review 217</p> <p>7.2 Linear Systems and
Gaussian Elimination 218</p> <p>7.3 Operation Counts 223</p>
<p>7.4 The LU Factorization 224</p> <p>7.5 Perturbation,
Conditioning and Stability 229</p> <p>7.6 SPD Matrices and the
Cholesky Decomposition 235</p> <p>7.7 Application: Numerical
Solution of Linear Least Squares Problems 236</p> <p>7.8 Sparse
and Structured Matrices 240</p> <p>7.9 Iterative Methods for Linear
Systems -- A Brief Survey 241</p> <p>7.10 Nonlinear Systems:
Newton's Method and Related Ideas 242</p> <p>7.11 Application:
Numerical Solution of Nonlinear BVP's 244</p> <p>8
Approximate Solution of the Algebraic Eigenvalue Problem
247</p> <p>8.1 Eigenvalue Review 247</p> <p>8.2 Reduction
to Hessenberg Form 249</p> <p>8.3 Power Methods 250</p>
<p>8.4 Bisection and Inertia to Compute Eigenvalues of Symmetric
Matrices 253</p> <p>8.5 An Overview of the QR Iteration
257</p> <p>8.6 Application: Roots of Polynomials, II 260</p> <p>8.
7 Application: Computation of Gaussian Quadrature Rules 261</p>
<p>9 A Survey of Numerical Methods for Partial Differential
Equations 265</p> <p>9.1 Difference Methods for the Diffusion
Equation 265</p> <p>9.2 Finite Element Methods for the Diffusion
Equation 270</p> <p>9.3 Difference Methods for Poisson Equations
271</p> <p>10 An Introduction to Spectral Methods
277</p> <p>10.1 Spectral Methods for Two-Point Boundary
Value Problems 277</p> <p>10.2 Spectral Methods in Two
Dimensions 279</p> <p>10.3 Spectral Methods for Time-Dependent
Problems 282</p> <p>10.4 Clenshaw-Curtis Quadrature 283</p>

Sommario/riassunto

A solutions manual to accompany An Introduction to Numerical Methods and Analysis, Third Edition An Introduction to Numerical Methods and Analysis helps students gain a solid understanding of a wide range of numerical approximation methods for solving problems of mathematical analysis. Designed for entry-level courses on the subject, this popular textbook maximizes teaching flexibility by first

covering basic topics before gradually moving to more advanced material in each chapter and section. Throughout the text, students are provided clear and accessible guidance on a wide range of numerical methods and analysis techniques, including root-finding, numerical integration, interpolation, solution of systems of equations, and many others. This fully revised third edition contains new sections on higher-order difference methods, the bisection and inertia method for computing eigenvalues of a symmetric matrix, a completely re-written section on different methods for Poisson equations, and spectral methods for higher-dimensional problems. New problem sets--ranging in difficulty from simple computations to challenging derivations and proofs--are complemented by computer programming exercises, illustrative examples, and sample code. This acclaimed textbook:

- Explains how to both construct and evaluate approximations for accuracy and performance
- Covers both elementary concepts and tools and higher-level methods and solutions
- Features new and updated material reflecting new trends and applications in the field
- Contains an introduction to key concepts, a calculus review, an updated primer on computer arithmetic, a brief history of scientific computing, a survey of computer languages and software, and a revised literature review
- Includes an appendix of proofs of selected theorems and author-hosted companion website with additional exercises, application models, and supplemental resources.
