Sommario/riassunto	This book focuses on the Heritage Conservation of Architecture, Historic Districts of a City and Conservation strategies with specific case studies from India, in order to highlight the need for conserving

the rich piece of history through research, education, advocacy, and practice. The historic significance and the condition mapping of the subjects are carried out through primary field studies by the authors at School of Planning and Architecture, Vijayawada, India. The cases are analysed, and appropriate solutions and sustainable strategies are evolved for the conservation of the buildings facing contemporary challenges. The contents align with the Sustainable Development Goals (SDG 11), Target 11.4 which aims to “strengthen efforts to protect and safeguard the world's cultural and natural heritage”. This would ensure that a rich piece of history is documented and analysed to ensure that it is not erased and forgotten. This book serves as a bountiful data base of literature as well as conservation strategies for heritage conservationists, students of architectural conservation and researchers.
