Descrizione fisica	viii, 205 p. : ill
Disciplina	612.8/2
Soggetti	Neuropsychology Brain Self
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di bibliografia	Includes bibliographical references (p. 179-192) and index.
Sommario/riassunto	In Altered Egos, Dr. Todd Feinberg presents a new theory of the self based on his first-hand experience as both a psychiatrist and neurologist. Feinberg introduces dozens of intriguing cases of patients whose disorders have resulted in what he calls altered egos: a change in the brain that transforms the boundaries of the self. He describes patients who suffer from alien hand syndrome where one hand might attack the patient's own throat, patients with frontal lobe damage who invent fantastic stories about their lives, paralyzed patients who reject and disown one of their limbs. He then argues that the brain damage suffered by these people has done more than simply impair certain functions--it has fragmented their sense of self. From these fascinating cases, Feinberg proposes a new model of the self that links the workings of the brain with unique and personal features of the mind, such as meaning, purpose, and being. Drawing on his own and other

evidence, he explains how the unified self, while not located in one or another brain region, arises out of the staggering complexity and number of the brain's component parts. Lucid, insightful, filled with fascinating case studies and provocative new ideas, *Altered Egos* promises to change the way we think about human consciousness and the creation and maintenance of human identity.

Sommario/riassunto	The stimulus of this study was the question as to whether programme strategies can reduce maternal mortality quicker than in the historically successful countries for Malaysia and Sri Lanka. Through case studies,

research and analysis of extent data of safe motherhood programmes in seven countries, the answer is yes: lessons learned concern six factors associated with success in reducing maternal mortality.; This work provides an analysis of factors reducing maternal mortality through three retrospective case studies in China, Honduras and Zimbabwe; and four research studies in Bolivia, Egypt, Indonesia and Jamaica.; Reduction of maternal mortality has now become an explicit focus of many programmes. Where such is targeted and strategies adapted to address the local barriers to move women into appropriate care for birth has resulted, this has impacted on the reported maternal mortality.
