| Autore | Pisello Anna Laura |
| Titolo | Building Resilient and Healthy Cities: A Guide to Environmental Sustainability and Well-being / / edited by Anna Laura Pisello, Ilaria Pigliautile, Stephen Siu Yu Lau, Nancy M. Clark |
| Pubbl/distr/stampa | Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2024 |
| ISBN | 9783031338632 3031338634 |
| Edizione | [1st ed. 2024.] |
| Descrizione fisica | 1 online resource (259 pages) |
| Collana | Advances in Science, Technology & Innovation, IEREK Interdisciplinary Series for Sustainable Development, , 2522-8722 |
| Altri autori (Persone) | Pigliautilellaria LauStephen S. Y ClarkNancy M |
| Disciplina | 307.1216 |
| Soggetti | Renewable energy sources Sustainability Public health Renewable Energy Public Health |
| Lingua di pubblicazione | Inglese |
| Formato | Materiale a stampa |
| Livello bibliografico | Monografia |
| Nota di contenuto | Greening the Local Solid Waste Management through Community Participation: Unfolding the Challenges and Creating Opportunities for Development Planning -- The Role of Waste Pickers in Solid Waste Management for Sustainability in Developing Cities -- Air Pollution and Solid Waste: Promoting Green and Resilient Recovery in Nigeria -- Generating a design concept of a multi-regulation biomimetic envelope as an approach to improving comfort conditions of the built environment -- The Role of Architectural Heritage in offering a more resilient lockdown in Egypt -- Evaluating the Summertime Overheating Signature of Domestic Buildings Using Synthetic Temperature Data -- Calm space, An outdoor escape area; A feasibility study on social participation of children with autism -- Landscape assessment as a tool for improving green infrastructure planning in Central Mexico. |
| Sommario/riassunto | This book presents a number of research papers that discuss how |

green urbanism is connected to promoting healthier living conditions. This is to reduce the impact of environmental changes including climate change, depletion of the earth's resources, and the emergence of infectious diseases and pandemics on humans. Addressing these challenges, the book at hand offers strategies and solutions that enable designers to bring together knowledge about sustainable and comfortable urban built environments, with an emphasis on the correlation between architecture, engineering, and medical facets in regard to comfort and well-being. Thus, the book is of significant importance to architects interested in the science of the built environment, climate change, and human resilience. This book is a culmination of selected research papers from the first version of the international conference on "Health & Environmental Resilience and Livability in Cities (HERL) - The challenge of climate change" which was held online in 2022 in collaboration with the University of Perugia, Italy, and the fifth edition of the international conference on Green Urbanism (GU) which was held online in 2021 in collaboration with the University of Rome.
