

1. Record Nr.	UNINA9910838177703321
Autore	Leonhardt Sven
Titolo	Innovations and Challenges of the Energy Transition in Smart City Districts
Pubbl/distr/stampa	Berlin/Boston : , : Walter de Gruyter GmbH, , 2023 ©2024
ISBN	3-11-077763-0 3-11-077756-8
Edizione	[1st ed.]
Descrizione fisica	1 online resource (730 pages)
Altri autori (Persone)	NusserTobias GörresJürgen RosingerSven Stryi-HippGerhard EckhardMartin
Soggetti	BUSINESS & ECONOMICS / Industries / Energy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Frontmatter -- Preface -- Foreword of the Editors -- Contents -- Enablers and Barriers to the Sustainable Transformation of Urban Districts -- Contributors -- 1 Presentation of the "ENaQ" Energy Transition Lighthouse -- 2 Regulatory and Legal Challenges for District Energy Systems in Practice and Research -- 3 Multi-Objective Design Optimisation of District Energy Supply - The Influence of Different Domestic Hot Water Concepts -- 4 District Energy Management Scheduling using a Participatory Local Energy Market -- 5 Establishing a Smart City Data and Interoperability Platform -- 6 The Role of Citizen Participation in Developing a New Energetically Efficient Quarter - Limitations and Success Factors -- 7 "Mixed Reality Systems in the Participation in Urban Land Use Planning." -- 8 Participatory Processes in Geodata-Based Thermal Energy Planning -- 9 Climate District Neue Weststadt -- 10 Climate Impact of Green Hydrogen in an Urban Context -- 11 Developing Sustainable City Districts: A Practitioner's Report on Klimaquartier Neue Weststadt -- 12 Design of a Mobility Infrastructure in the Urban District with Special Consideration of the

Public and Private Charging Infrastructure and the Expansion of the Bus Overhead Line Network -- 13 Power System Supporting Control Strategy for Es\_West\_P2G2P - from Idea to Implementation -- 14 Social Research to Enable Human-Oriented Energy Transition. Results from a Climate District -- 15 Integrated Research Approach of the Lighthouse Project EnStadt:Pfaff -- 16 Need for Further Development in Urban Land Use Planning to Enable Climate-neutral Districts -- 17 Methods for the Development of Energy Concepts for Climate Neutral Neighbourhoods -- 18 Greenhousegas Balancing and Life Cycle Analysis in the Context of Climate-Neutral Neighbourhoods -- 19 A Climate-Neutral Smart City District Supported by Digital Solutions -- 20 Technologies for Climate Neutral Districts: Agent Based Energy Management and Blockchain Based Organization for Energy Communities -- 21 Learning from Climate-Neutral Neighbourhoods: Social Scientific Work in the Living Lab EnStadt:Pfaff -- 22 QUARREE100 - Resilient, Integrated, System-Serving and Sustainable Energy Supply Systems in Existing Urban Quarters in the Context of Regional Structural Processes -- 23 Renewable Energy Communities - A New Model for Neighbourhoods? -- 24 Integration of Heat Consumers into Green Heating Networks - Municipal Control Instruments -- 25 Development and Basic Conceptualization of Digital Decision Support Tools to Promote Participation Processes in Energy Transition -- 26 Stochastic Modelling and Economic Analysis of Systems for using Volatile Solar Power -- 27 Resilient Energy System Design of Low Emission Districts - A Model Chain from National Scenarios to Plant Operation -- 28 Challenges for Establishing a Municipal Heating Company from a Research Project -- 29 Design and Integration of Large Heat Pumps for District Heating with heterogeneous building structures -- 30 Quantification of Regional Economic Effects through a Sustainable Heat Supply of a Neighbourhood -- 31 Presenting the lighthouse of energy transition "STADTQUARTIER 2050" -- 32 Solutions for Climate-Neutral District Concepts -- 33 ZED (Demonstrating Zwickau's Energy Transition): Innovations and Transformation for the Energy Turnaround -Electrical-Thermal Wide Area Synchronous Grid as the Basis for Energy-Efficient and Socially Fair Quarter Development -- 34 Thermal Smart Grid for Decentralised Heat Supply in the Quarter -- 35 Heat-Pump-Based Local District Heating System with Hot Water Store -- 36 Interconnection of Smart Homes and Smart Buildings as a Building Block of Smart Cities -- 37 Forecast-Based Storage Control at Quarter Level -- 38 User-Centred and Sustainable Local Mobility - A Participatory Approach in the Neighbourhood -- Index

---

## Sommario/riassunto

As living, economic and cultural spaces, cities require a sustainable energy system and must be designed to be highly energy efficient. The book provides a framework for practitioners and scientists on how the energy transition can contribute to achieving climate goals in the building sector. Innovations and creative approaches for solutions from the lighthouse projects of the Solar Building/Energy Efficient City funding initiative are presented.
