

1. Record Nr.	UNINA9910838288803321
Autore	Lavretsky Eugene
Titolo	Robust and Adaptive Control : With Aerospace Applications
Pubbl/distr/stampa	Cham : , : Springer International Publishing AG, , 2024 ©2024
ISBN	3-031-38314-1
Edizione	[2nd ed.]
Descrizione fisica	1 online resource (718 pages)
Collana	Advanced Textbooks in Control and Signal Processing Series
Altri autori (Persone)	WiseKevin A
Disciplina	629.8312
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Series Editor's Foreword to the Second Edition -- Preface to the Second Edition -- Preface to the First Edition -- Acknowledgments -- Contents -- Part I Robust Control -- 1 Introduction -- 1.1 Why Robust and Adaptive Control? -- 1.2 About This Book -- 1.3 Aircraft Flight Dynamics Equations of Motion -- 1.4 High-Fidelity Flight Simulation Environment -- 1.5 Simplified Flight Dynamics for Control Design -- 1.6 Summary -- 1.7 Exercises -- References -- 2 Linear Time-Invariant Systems and Control -- 2.1 Model-Based Control Engineering -- 2.2 Control System Design Goals and Objectives -- 2.3 Feedback and Feedforward Control -- 2.4 State-Space Systems -- 2.4.1 Time and Frequency Domain Modeling of State-Space Systems -- 2.4.2 Control-Oriented Models for Linear Time-Invariant Systems -- 2.4.3 State-Space Similarity Transformations -- 2.4.4 Eigenvalues and Eigenvectors -- 2.4.5 Computing the State Transition Matrix -- 2.5 Stability, Controllability, and Observability -- 2.5.1 Stability of LTI Systems -- 2.5.2 Controllability of LTI Systems -- 2.5.3 Observability of LTI Systems -- 2.6 Norms of Vectors and Matrices in Euclidean Spaces -- 2.7 Summary -- 2.8 Exercises -- References -- 3 Frequency Domain Analysis -- 3.1 Introduction -- 3.2 Transfer Functions and Transfer Function Matrices -- 3.3 Multivariable Stability Margins -- 3.3.1 Singular Values -- 3.3.2 Multivariable Nyquist Theory -- 3.3.3 Singular Value-Based Stability Margins for MIMO Systems -- 3.4 Control System Robustness Analysis -- 3.4.1 Analysis Models for Uncertain Systems -- 3.4.2 Singular Value Robustness Tests

-- 3.4.3 Real Stability Margin -- 3.5 Conclusions -- 3.6 Exercises --
 References -- 4 Optimal Control and Linear Quadratic Regulators --
 4.1 Introduction -- 4.2 Optimal Control and the Hamilton-Jacobi-
 Bellman Equation.
 4.2.1 The HJB Equation for Nonlinear Systems Affine in Control -- 4.3
 Linear Quadratic Regulator (LQR) -- 4.3.1 Infinite-Time LQR Problem --
 4.3.2 Guaranteed Stability Robustness for State Feedback LQR -- 4.3.3
 LQR Design and Asymptotic Properties -- 4.4 Command Tracking
 and Robust Servomechanism Control -- 4.4.1 Servomechanism Control
 Design Model -- 4.4.2 Servomechanism Model Controllability -- 4.4.3
 Servomechanism Control Design -- 4.5 Conclusions -- 4.6 Exercises
 -- References -- 5 State Feedback H Optimal Control -- 5.1
 Introduction -- 5.2 Norms for Signals and Systems -- 5.3 Stability
 and Performance Specifications in the Frequency Domain -- 5.4 Loop
 Shaping Using Frequency-Dependent Weights -- 5.5 State Feedback
 H Optimal Control -- 5.6 Controller Design Using -Iteration -- 5.7
 Conclusions -- 5.8 Exercises -- References -- 6 Output Feedback
 Control and State Observers -- 6.1 Output Feedback Using Projective
 Controls -- 6.2 Full-Order State Observers for Linear Time-Invariant
 Systems -- 6.2.1 The Separation Principle -- 6.2.2 Observer-Based
 Optimal Servomechanism Design -- 6.2.3 Asymptotic Properties
 of the Algebraic Riccati Equation -- 6.2.4 The Squaring-Up Method --
 6.3 Observer-Based Control with Loop Transfer Recovery -- 6.3.1
 OBLTR Design Process and Examples -- 6.4 Summary -- 6.5 Exercises
 -- References -- Part II Robust Adaptive Control -- 7 Direct Model
 Reference Adaptive Control: Motivation and Introduction -- 7.1 Model
 Reference Control: Motivational Example -- 7.2 Introduction to Direct
 Model Reference Adaptive Control -- 7.3 Direct Model Reference
 Adaptive Control of Scalar Linear Systems with Parametric Uncertainties
 -- 7.4 Historical Roots and Foundations of Model Reference Adaptive
 Control -- 7.5 Exercises -- References -- 8 Lyapunov Stability
 of Motion -- 8.1 Dynamical Systems -- 8.2 Existence and Uniqueness
 of Solutions.
 8.3 System Equilibrium -- 8.4 Lyapunov Stability Definitions -- 8.5
 Lyapunov Stability Theorems -- 8.6 Uniform Ultimate Boundedness --
 8.7 Barbalat's Lemma -- 8.8 Summary and Historical Remarks -- 8.9
 Exercises -- References -- 9 State Feedback Direct Model Reference
 Adaptive Control -- 9.1 Introduction -- 9.2 Command Tracking -- 9.3
 Direct MRAC Design for Scalar Systems -- 9.4 Dynamic Inversion MRAC
 Design for Scalar Systems -- 9.5 MRAC Design for Multi-Input-Multi-
 Output Systems -- 9.6 Summary -- 9.7 Exercises -- References -- 10
 Model Reference Adaptive Control with Integral Feedback Connections
 -- 10.1 Introduction -- 10.2 Control Design -- 10.3 MRAC
 Augmentation of an Optimal Baseline Controller -- 10.4 Summary --
 10.5 Exercises -- References -- 11 Robust Adaptive Control -- 11.1
 MRAC Design in the Presence of Bounded Disturbances -- 11.2 MRAC
 Design Modifications for Robustness -- 11.2.1 The Dead-Zone
 Modification -- 11.2.2 The -Modification -- 11.2.3 The e-
 Modification -- 11.3 The Projection Operator -- 11.4 Projection-Based
 MRAC Design -- 11.5 Summary and Discussion -- 11.6 Exercises --
 References -- 12 Approximation-Based Adaptive Control -- 12.1
 Motivation -- 12.2 Basic Definitions -- 12.3 Approximation Properties
 of Feedforward Neural Networks -- 12.4 Adaptive Control with State
 Limiting Constraints -- 12.5 Summary -- 12.6 Exercises -- References
 -- 13 Adaptive Control with Improved Transient Dynamics -- 13.1
 Motivation -- 13.2 Asymptotic Orders and Singular Perturbations --
 13.3 Asymptotic Properties of the Algebraic Riccati Equation -- 13.4
 System Dynamics and Control Problem Formulation -- 13.5 Observer-

Like Model Reference Adaptive Control -- 13.6 Transient Dynamics Analysis -- 13.7 Summary -- 13.8 Exercises -- References -- 14 Output Feedback Servomechanism with Observer-Based Loop Transfer Recovery and Adaptive Augmentation.

14.1 Introduction -- 14.2 Optimal Control with "Cheap" Input and "Expensive" Output -- 14.3 Optimal Cost Asymptotic Analysis -- 14.4 ARE Asymptotic Analysis -- 14.5 Adaptive Output Feedback Design and Analysis -- 14.6 Adaptive Flight Control of a Flexible Transport Aircraft -- 14.7 Design Case Study: Control of the "Respect the Unstable" Dynamics -- 14.8 Design Case Study: (OBLTR + Adaptive) Flight Control of Aircraft MIMO Roll-Yaw Dynamics -- 14.9 Conclusions -- 14.10 Exercises -- References -- 15 Robust and Adaptive Output Feedback Control for Square Non-Minimum Phase Systems -- 15.1 Introduction -- 15.2 Problem Motivation -- 15.3 The Squaring-Up Design for Non-Minimum Phase Systems with Arbitrary Relative Degree -- 15.4 Observer-Based Loop Transfer Recovery (OBLTR) Servo-Controller for Square Systems -- 15.5 Loop Transfer Recovery and OBLTR Stability Margins for Square Systems -- 15.6 OBLTR Adaptive Augmentation for Square Non-Minimum Phase Systems -- 15.7 Summary -- 15.8 Exercises -- References -- Appendix A: Aircraft Flight Simulation (aFltSim) Software -- A.1 Aircraft Flight Dynamics Equations of Motion -- A.2 High-Fidelity Flight Simulation Environment -- A.3 Simplified Flight Dynamics for Control Design -- A.4 aFltSim Block Diagram Architecture and Calling Sequence -- References -- Index.
