

1. Record Nr.	UNINA9910840765303321
Titolo	Aluminum in biology and medicine [[electronic resource]]
Pubbl/distr/stampa	Chichester [England] ; ; New York, : Wiley, 1992
ISBN	1-282-34780-2 9786612347801 0-470-51430-2 0-470-51431-0
Edizione	[1st ed.]
Descrizione fisica	1 online resource (336 p.)
Collana	Ciba Foundation symposium ; ; 169
Altri autori (Persone)	ChadwickDerek WhelanJulie
Disciplina	612.01524 615.9
Soggetti	Aluminum - Physiological effect Aluminum - Pathophysiology Alzheimer's disease - Pathophysiology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Editors, Derek J. Chadwick (organizer) and Julie Whelan. "A Wiley-Interscience publication."
Nota di bibliografia	Includes bibliographical references and indexes.
Nota di contenuto	ALUMINIUM IN BIOLOGY AND MEDICINE; Contents; Aluminium in biology: an introduction; Aluminium speciation in biology; Dietary and other sources of aluminium intake; The interrelationship between silicon and aluminium in the biological effects of aluminium; The epidemiology of Alzheimer's disease in relation to aluminium; Aluminium and the pathogenesis of Alzheimer's disease: a summary of evidence; Intestinal absorption of aluminium; Aluminium intoxication in renal disease; Aluminium and Alzheimer's disease Aluminium accumulation, B-amyloid deposition and neurofibrillary changes in the central nervous systemAluminium(III) in experimental cell pathology; Elemental analysis of neurofibrillary tangles in Alzheimer's disease using proton-induced X-ray analysis; Aluminium and the neurofibrillary tangle: results of tissue microprobe studies; Intracellular effects of aluminium on receptor-activated cytoplasmic Ca ²⁺ signals in pancreatic acinar cells; Neurotoxic effects of dietary

aluminium

Molecular characterization and measurement of Alzheimer's disease pathology: implications for genetic and environmental aetiology Summing-up; Index of contributors; Subject index

Sommario/riassunto

Prominent contributors address issues regarding the toxicity of aluminum which causes an encephalopathy in renal dialysis patients and is also known to damage animals and plants via acid rain. Examines the chemistry and biology of aluminum compounds focusing on the evidence for and against aluminum's role in Alzheimer's disease.
