Sommario/riassunto

The notion of quality of life has for several decades been well-established in ethical debate about health care and the care of older people. Dignity in Care for Older People highlights the notion of dignity within the care of the elderly, focusing on the importance of theoretical concepts. Primarily based on a Research Project, Dignity and Older Europeans, funded by the European Commission, this book provides a thorough investigation of the concept of dignity and related concepts such as quality of life and autonomy. It includes a chapter devoted to the dignity of human embodiment
