| Sommario/riassunto | This collective volume provides an integrative historical and contemporary discussion of Sunni ulama in the Middle East in both an urban and a semi-tribal context. The various chapters reinforce a renewed interest in the position of the ulama in modern times and offer new insights as to their ideological vitality and contribution to the public discourse on moral and sociopolitical issues. |

Sommario/riassunto

This book addresses the interplay between stochastic processes and partial differential equations. More specifically, it focuses on the connection between the nonlinear p-Laplace equation and the stochastic game called tug-of-war with noise. The connection in this context was discovered approximately 15 years ago and has since provided new insights and approaches. These lecture notes provide a brief but detailed and accessible introduction to the subject and to the more research-oriented literature. The book also presents the parabolic case side by side with the elliptic case, highlighting the fact that elliptic and parabolic equations are close in spirit in certain aspects. Moreover, it covers some parts of the regularity theory for these problems. Graduate students and advanced undergraduate students with a basic understanding of probability and partial differential equations will find this book useful.
