

1. Record Nr.	UNINA9910841866803321
Autore	Dixit Ambesh
Titolo	Energy Materials and Devices : Proceedings of E-MAD 2022
Pubbl/distr/stampa	Singapore : , : Springer, , 2024 ©2024
ISBN	981-9990-09-2
Edizione	[1st ed.]
Descrizione fisica	1 online resource (360 pages)
Collana	Advances in Sustainability Science and Technology Series
Altri autori (Persone)	SinghVijay K AhmadShahab
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Patrons -- Preface -- Director's Message -- Contents -- About the Editors -- Part I Batteries and Supercapacitors -- 1 Na-Rich Layered Oxide Cathode Materials for High-Capacity Na-Ion Batteries: A Review -- 1 Introduction -- 2 Layered-Oxide Cathode Materials -- 3 Origin of Reversible/Irreversible Anionic Redox -- 4 3d Transition Metal-Based Cathode Material -- 5 4d or 5d-Transition Metal-Based Cathode Materials -- 6 Mixed Transition Metal-Based Cathode Materials -- 7 Challenges and Opportunities -- References -- 2 In-Situ X-Ray Diffraction Studies of Battery Electrode Materials for the Microscopic Understanding of the Phase Stability and Performance Correlation -- 1 Introduction -- 2 In-Situ Versus Ex-Situ X-Ray Diffraction -- 3 Sample Stage in In-Situ XRD -- 4 Case Studies -- 4.1 In-Situ XRD Studies of Cathode Materials for Li-Ion Battery (LIB) During the Charging/Discharging Process -- 4.2 In-Situ XRD of Sodium (Na) Ion Battery During the Charging/Discharging Process -- 5 Summary and Conclusion -- References -- 3 In-Situ Raman Characterization of Electrode Materials for Rechargeable Li/Na Ion Batteries -- 1 Introduction -- 2 Design and Practical Parameters for In-Situ Raman Spectroscopy -- 3 Case Study of Some Most Popular Cathode Materials -- 4 Conclusion -- References -- 4 Mo2C: A Potential Anode Material for Lithium and Sodium Ion Battery -- 1 Introduction -- 2 Results and Discussions -- 2.1 Structure of Mo2C and Its Composites -- 3

Electrochemical Performance -- 4 Conclusions -- 5 Experimental Section -- References -- 5 Diffusion and Ion-Ion Correlations in EC-LiTFSI Electrolytes -- 1 Introduction -- 2 Simulation Methods -- 2.1 Equilibration Protocol -- 3 Results and Discussion -- 3.1 Structural Phenomenon -- 3.2 Mean Squared Displacement and Diffusion Coefficient -- 3.3 Ion-Pair Correlations -- 3.4 Ionic Conductivity. 4 Conclusions -- References -- 6 Photo-Enhanced Li-Ion Batteries Based on Conversion Type Hematite Phase Iron Oxide Nanostructures -- 1 Introduction -- 2 Results and Discussion -- 3 Conclusion -- References -- 7 Experimental Study on Dead-Lithium Formation in Lithium-Ion Battery -- 1 Introduction -- 2 Methodology -- 2.1 Battery Screening -- 2.2 Cycling -- 2.3 Electrochemical Impedance Spectroscopy (EIS) -- 3 Results and Discussion -- 4 Conclusion -- References -- 8 Cost-Effective Aluminum-Air Battery with Enhanced Performance Using V₂O₅ Catalyst Together with NH₄VO₃ Additive in an Alkaline Medium -- 1 Introduction -- 2 Experimental Section -- 2.1 Reagents -- 2.2 Slurry Preparation for Catalyst -- 2.3 Electrolyte Preparation -- 2.4 Cell Assembly -- 2.5 Measurements and Characterization -- 3 Results and Discussion -- 3.1 The Electrochemical Performance of AAB -- 3.2 Post-mortem Analysis -- 4 Conclusion -- References -- 9 Low-Cost Aqueous Rechargeable Iron-Ion Battery in Ambient Conditions Using C₃N₄-Based Cathode -- 1 Introduction -- 2 Experimental -- 2.1 Synthesis of the Electrode and Electrolyte -- 2.2 Fabrication of the Coin Cell Assembly -- 3 Result and Discussion -- 3.1 Morphological and Structural Characterization -- 3.2 Cyclic Voltammetry (CV) -- 3.3 Galvanostatic Charging-Discharging (GCD) -- 3.4 Electrochemical Impedance Spectroscopy (EIS) -- 3.5 Post-mortem of the Electrode -- 4 Conclusion -- References -- 10 High-Performance Aqueous Asymmetric Supercapacitor Based on Hybrid Electrodes -- 1 Introduction -- 2 Experimental -- 3 Characterization -- 3.1 Structural Analysis -- 3.2 Electrochemical Properties Measurement -- 4 Results and Discussion -- 4.1 Structural Analysis -- 4.2 Electrochemical Measurement -- 5 Conclusion -- References -- 11 Exfoliated Graphite as a Potential Host for Zinc Oxide Nanorods-Based Symmetric Flexible Supercapacitor. 1 Introduction -- 2 Experimental Section -- 2.1 Materials and Reagents -- 2.2 Characterization Equipment Model -- 2.3 Exfoliation of Natural Graphite Flakes (NGFs) -- 2.4 Synthesis of ZnO NRs -- 2.5 Assembling of Coin Cell Supercapacitors (SCs) -- 3 Results and Discussions -- 3.1 X-Ray Diffraction (XRD) Analysis -- 3.2 Scanning Electron Microscopy (SEM) Analysis -- 3.3 Electrochemical Characterizations -- 4 Conclusion -- References -- 12 SrTiO₃/CNT/PANI Ternary Composite for Supercapacitor Applications -- 1 Introduction -- 2 Experimental -- 2.1 Materials -- 2.2 Preparation of STO -- 2.3 Preparation of STO/CNT Composite -- 2.4 Preparation of STO/CNT/PANI Composite -- 2.5 Sample Characterisation -- 2.6 Electrochemical Studies -- 3 Results and Discussions -- 3.1 Structural Characterisation -- 3.2 Morphological Characterisation -- 3.3 Electrochemical Characterisation -- 4 Conclusions -- References -- 13 Enhance the Electrochemical Parameters of Supercapacitor Using ZnO Based Electrode Material -- 1 Introduction -- 2 Synthesis of Electrode Material -- 3 Result and Discussions -- 3.1 Thermal Gravimetric Analysis -- 3.2 X-Ray Diffraction -- 3.3 Scanning Electron Microscope and Energy Dispersive X-Ray Spectroscopy -- 3.4 Brunauer Emmitt Teller (BET) -- 3.5 Cyclic Voltammetry (CV) -- 3.6 Galvanostatic Charge Discharge (GCD) Profiles -- 4 Conclusion -- References -- 14 Characterization and Analysis of (1-x) Ba_{0.96}Sr_{0.04}Zr_{0.1}Ti_{0.9}O_{3-x}NaNbO₃: A Study on Structural, Dielectric and Energy Storage Behaviour -- 1 Introduction -- 2

Experimental Procedure -- 2.1 Synthesis of (1-x) BSZT-xNN Ceramic --
2.2 Characterization of (1-x) BSZT-xNN Ceramic -- 3 Result
and Discussion -- 3.1 Structural Study -- 3.2 Morphological Study --
3.3 Dielectric Study -- 3.4 Ferroelectric Study -- 4 Conclusion --
References -- Part II Hydrogen Generation and Storage.
15 Recent Progress and Challenges in Hydrogen Storage Medium
and Transportation for Boosting Hydrogen Economy -- 1 Introduction:
The Context and Origins of Hydrogen Energy Technologies -- 2
Hydrogen as Sustainable Energy Source and International Prospective
-- 3 Standards Required for Hydrogen Storage Technologies and Their
Challenges -- 4 Various Hydrogen Storage Technologies and Their
Limitations -- 4.1 Liquid Hydrogen Storage Technology and Its
Limitations -- 4.2 Compressed Gaseous Hydrogen Storage Technology
and Its Limitations -- 4.3 Solid-State Hydrogen Storage Methods -- 5
Use of Hydrogen in Transportation -- 5.1 Compressed Hydrogen
in High Pressure Cylinder for Mobility Application -- 5.2 Hydrogen
Stored in Solid Material "Hydride Tanks" as Fuel for IC Engine-Based
Vehicles -- 5.3 Hydrogen Powered Fuel Cell Electrical Vehicles (FCEVs)
for Transportation -- 6 Discussion -- 7 Conclusion and Future
Prospects -- References -- 16 Concentrated Solar Thermal-Based
Hydrogen Generation: Some Recent Findings and a Proposal
for Experiment Setup -- 1 Introduction -- 1.1 Literature Review -- 2
System Design and Preliminary Analysis -- 2.1 Concentrated Solar
Thermal-Based Water Splitting -- 2.2 A Proposed Experiment Facility
for Thermo-Catalytic Decomposition of Ammonia -- 3 Conclusions
and Future Scope -- References -- 17 Waste Plastic Generated High-
Performance Nanocomposites for Modern EDLC and LIB: A Two-Way
Sustainable Approach -- 1 Introduction -- 2 Sustainability in Energy
Storage -- 3 Nanocomposites from Waste Plastic Material -- 4
Overview of Waste Plastic Nanocomposites for Supercapacitors -- 5
Overview of Waste Plastic Nanocomposites for Li-Ion Batteries -- 6
Conclusions and Future Scope of Plastic Nanocomposites for Energy
Technologies -- References -- 18 Effect of La-Ni-Based Alloys
on Hydrogenation/Dehydrogenation Properties of MgH₂.
1 Introduction -- 2 Experimental -- 2.1 Alloy Preparation -- 2.2
Annealing -- 2.3 Ball Milling -- 3 Results and Discussion -- 4
Conclusions -- References -- 19 Au Nanoparticle Decorated g-
C₃N₄/Bi₂S₃ Photoanodes for Photoelectrochemical Water Splitting -- 1
Introduction -- 2 Experimental Section -- 2.1 Chemicals -- 2.2
Photoanode Preparation -- 2.3 Characterization Techniques -- 2.4
Photoelectrochemical Measurements -- 3 Results and Discussion -- 3.1
Crystallographic Studies -- 3.2 Absorption Studies -- 3.3 Microscopic
Analysis -- 3.4 Photoelectrochemical Studies -- 3.5 Photoluminescence
Studies -- 3.6 Mott-Schottky Studies -- 3.7 Plausible Mechanism -- 4
Conclusion -- References -- 20 Nanostructured Binder-Free Cost
Effective SnS₂ Electrocatalyst for Efficient Hydrogen Evolution Reaction
-- 1 Introduction -- 2 Experimental Section -- 2.1 Materials -- 2.2
Synthesis Process -- 2.3 Material Characterizations -- 2.4
Electrochemical Measurements -- 3 Results and Discussions -- 3.1
Structural and Microstructural Analysis -- 3.2 Electrochemical Analysis
-- 4 Conclusions -- References -- 21 Nano-Engineered Vanadium
Doped NiS Catalyst for Efficient Electrochemical Water Splitting -- 1
Introduction -- 2 Experimental Section -- 2.1 Chemical and Materials
-- 2.2 Preparation of NiS@NF and V-NiS@NF -- 2.3 Characterization --
2.4 Electrochemical Measurement -- 3 Result and Discussion -- 3.1
Structural and Microstructural Characterization -- 3.2 Electrocatalytic
Analysis -- 4 Conclusion -- References -- 22 High Efficiency Zero
Carbon Emission Oxy-Hydrogen (HHO) Generator -- 1 Introduction --

2 Water Splitting: Chemical Aspects -- 3 Setting up the Device -- 4
Experimental Observations and Analysis -- 4.1 Selection of Electrodes
-- 4.2 Selection of Electrolyte -- 4.3 Impacts of Neutral Plates Count --
5 Conclusions -- References -- Part III Energy Harvesting.
23 Morphological Impact on ZnO Material for Designing Hydroelectric
Cell-A Way to Harness Green Electricity by Water Splitting.
