

1. Record Nr.	UNINA9910842285403321
Autore	Chhaya Pradeep (Pradeep J. N.)
Titolo	On the Origin and Nature of Cognition : A Topological Model of Cognitive Architecture // by Pradeep J.N. Chhaya
Pubbl/distr/stampa	Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2024
ISBN	9783031511059
Edizione	[1st ed. 2024.]
Descrizione fisica	1 online resource (335 pages)
Disciplina	153
Soggetti	Psychology Cognitive psychology Evolutionary psychology Artificial intelligence Behavioral Sciences and Psychology Cognitive Psychology Evolutionary Psychology Artificial Intelligence Psicologia cognitiva Psicologia evolucionista Intel·ligència artificial Llibres electrònics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chapter 1 Nature of Neuronal Organization: Structural Agnosticism and its Origin -- Chapter 2 Natural Selection in Neuronal Architecture: Origins of Cognition -- Chapter 3 Nature of the Relationship Between the Brain and the Mind -- Chapter 4 Nature of Cognition: An Involved Model of Sensory Perceptions -- Chapter 5 Nature of Psychological Memory: An Involved Model of Virtual Storage -- Chapter 6 Nature of Human Intelligence: An Involved Model of Semantic Search -- Chapter 7 Compositionality vs. Computability: Topology of Cognitive Computations -- Chapter 8 Cognitive Architecture: Modularity of Mind and Its Integration.
Sommario/riassunto	This monograph is an extension of the earlier monographs dealing with

the application of the new modified involuted manifold model. This monograph has two objectives. Firstly, it seeks to integrate neuronal organization with cognitive functionalities. Secondly, it tries to formalize a structural template of cognitive functionalities. It is based on the postulate that cognitive functionalities are essentially natural phenomena and therefore amenable to formal naturalistic description. Therefore, it employs a topological model of spacetime proposed earlier to define a new framework wherein neuronal networks occupy the four-dimensional configurations of spacetime, and cognitive functionalities occupy higher dimensional configurations of spacetime. Using the Darwinian conception of natural selection, the monograph outlines a model of natural selection operating at more than one level. Thus, natural selection at the four-dimensional configurations of spacetime leads to structural agnosticism so prevalent in neuronal organization. At the same time, natural selection at the higher dimensional configurations of spacetime leads to natural selection of cognitive functionalities. Since the proposed model offers a new computational paradigm formalized in another monograph, this monograph provides a new way to formalize cognitive computations. Integrates the neuronal organization with cognitive functionalities using a completely naturalistic topological model; Offers a structural template of cognitive functionalities congruent with the Darwinian conception of natural selection; Provides a structural template of cognitive memories and makes it amenable to computational description. .
