| Sommario/riassunto | One of the most amazing and accessible wildlife-watching destinations on earth, the "Top End" of Australia's Northern Territory is home to incredible birds and animals-from gaudy Red-collared Lorikeets to sinister Estuarine Crocodiles and raucous Black Flying-foxes. With this lavishly illustrated photographic field guide, you will be able to identify the most common creatures and learn about their fascinating biology-from how Agile Wallaby mothers can pause their pregnancies to why Giant Frogs spend half the year buried underground in waterproof cocoons.The Top End stretches from the tropical city of Darwin in the north, to the savannas of Mataranka in the south, and southwest across the vast Victoria River escarpments to the Western Australian border. The region includes some of Australia's most popular and impressive |

tourist destinations, such as Kakadu, Litchfield, Nitmiluk, and Gregory national parks, and is visited by more than two hundred thousand tourists every year. An essential field guide for anyone visiting the Top End, this book will vastly enhance your appreciation of the region's remarkable wildlife. Features hundreds of stunning color photographs. Includes concise information on identification and preferred habitat for each species. Provides a summary of each species' life history, including interesting habits, and suggestions on where to see it. Offers valuable tips on searching for wildlife in the Top End. An essential guide for visitors to the Top End, from Darwin south to Katherine and Kununurra, including Kakadu, Litchfield, Nitmiluk and Gregory national parks

| Sommario/riassunto | This book offers a systematization of the recourse to political incivility by different subjects and in different contexts. The authors argue that incivility has now become a strategic resource that can be used by various actors in the public arena to achieve specific goals. We are referring not only to traditional political subjects, but also to journalists, citizens, movements and protest groups, that is to a plurality of actors who, from different angles, contribute to the construction of the "political spectacle". This resource can be activated according to circumstances and conveniences, whether their nature be political (to place an issue at the center of public debate or a new actor in the offer range), mediatic (to achieve an increase in visibility or viewership) or relational (to expand one's visibility and centrality in |

social media). The book identifies common elements linking the different levels of use of incivility, which can be traced in uncivil forms of communication. These are their expressive power (memorable gestures and unequivocal messages, which are immediately recognizable and visible), their aggregation power (they build group identities, and consolidate allegiances and bonds) and their mobilization power (they galvanize people, and inspire them to participate and take action). Sara Bentivegna is Full Professor at the Sapienza University of Rome, Italy. Rossella Rega is Associate Professor at the University of Siena, Italy.

Appendices.

Sommario/riassunto

This book bridges the fields of Supply Chain Management, Digital Transformation, and Dynamic Quality models in order to illustrate how digital transformation affects the work of researchers and managers in Supply Chain Quality problems. It aims to address the gap in scholarship regarding new technologies, updating the established literature to reimagine theoretical models, dynamic games, knowledge management, supply chain coordination solutions, interfaces in circular economies, and other functional spaces for a digital era. Written for researchers, managers, and practitioners, this book offers an accessible approach to the topics through clear, management-oriented chapters, reserving mathematical background for the Appendices. It discusses an array of modern challenges in digitization, including smart device installation, Cloud data accessibility, applications of AI systems, Supply Chain monitoring via Blockchains, using sensors in operations, and digital tool integration within traditional IS frameworks. .
