Sommario/riassunto

This book explores multidisciplinary perspectives on critical issues in space from the viewpoints of New Zealand and other nations. It brings together the topics examined at the Otago Foreign Policy School 2022 by both domestic and international experts in the area of space, and includes the opening address on space policy delivered by the Minister of Foreign Affairs. This book takes a multidisciplinary approach to New Zealand's growing space sector in conjunction with other nations' perspectives on space. It encompasses space science, military and defence matters, space tourism and astronaut rescue, and international legal and policy frameworks, while taking into account future considerations. Readers such as academics, students, policy advisers, diplomats, government officials and others engaged in the field of space will find value in this book. It will appeal to think tanks and international institutions grappling with the complexities that are presented by the outer space domain.
