Sommario/riassunto

This edited volume reviews 20 years' worth of research under the European Landscape Convention. The authors from the research network UNISCAPE offer readers insights into their combined efforts to carry out and support the goals of a sustainable European landscape. 20 years after defining these original goals, the editors make landscape ecology and management, a cornerstone for the debate on a 21st century Europe. The numerous contributions cover the three major areas of Landscape Policy and Governance, Landscape Design and Time and Observing Landscape. An additional segment will be dedicated specifically to Agriculture and Forest heritage. The pan-European approach highlights the strength of international collaboration and interdisciplinary thinking. This book offers the collected knowledge as a working tool for researchers, scholars and professionals in landscape ecology.
