

1. Record Nr.	UNINA9910855383503321
Autore	Thomas George V
Titolo	Soil Health Management for Plantation Crops : Recent Advances and New Paradigms
Pubbl/distr/stampa	Singapore : , : Springer, , 2024 ©2024
ISBN	981-9700-92-2
Edizione	[1st ed.]
Descrizione fisica	1 online resource (544 pages)
Altri autori (Persone)	KrishnakumarV
Disciplina	631.4
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Foreword -- Preface -- Acknowledgement -- About the Book -- Contents -- Editors and Contributors -- About the Editors -- Contributors -- Plantation Crops and Soil Health Management: An Overview -- 1 Introduction -- 2 Global Status of Plantation Crops -- 3 Soil and Climatic Requirements of Plantation Crops -- 4 Soil Degradation as a Major Constraint Affecting Sustainability -- 5 Soil Health: The Most Important Foundation for Plantation Sustainability -- 6 Organic Farming in Plantation Crops as a Soil Life-Centered Approach -- 7 Soil Fertility Management in Plantation Crops -- 7.1 Nutrient Management -- 7.2 Availability of Crop Residue Biomass in Plantations and Plantation-Based Cropping Systems -- 7.3 Recycling Technologies for Lignocellulosic Residue Biomass from Plantation Crops -- 7.4 Microbial Inoculants Possessing Functional Attributes to Enhance Growth and Productivity -- 7.5 Harnessing Symbiotic Nitrogen Fixation by Leguminous Crops -- 7.6 Integrated Nutrient Management to Enhance Soil Health and Productivity -- 8 Plantation Crop-Based Cropping/Farming Systems as Agroecosystem-Driven Approach -- 8.1 Soil Biological Fertility Responses to Enhancement of Aboveground Biodiversity in a System Mode -- 8.2 Agroforestry-Based Plantation Production Systems -- 9 Biodiversity and Ecosystem Services -- 10 Microbiome Engineering to Enhance Plant Health and Productivity -- 11 Climate Smart Agricultural Practices for Soil Health Improvement -- 12 Plantation Agroecosystems Management

for Efficient Carbon Sequestration -- 13 Conclusions -- References --
Coconut (*Cocos nucifera* L.) -- 1 Introduction -- 2 Importance
of Coconut -- 3 General Soil Characteristics and Requirements -- 3.1
Soil Types Suitable for Coconut Cultivation -- 3.2 Water Table -- 3.3
Soil Depth -- 3.4 Soil pH -- 3.5 Electrical Conductivity.
3.6 Available Mineral Nutrients -- 4 Soil Biological Properties -- 4.1
Soil Organic Matter and Soil Organic Carbon -- 4.2 Soil Microbiota --
4.3 Soil Enzymes and Metabolites -- 5 Indicators of Soil Health
and Their Assessment for Sustainable Coconut Cultivation -- 5.1
Physical Indicators -- 5.2 Chemical Indicators -- 5.3 Biological
Indicators -- 5.3.1 Soil Microbial Biomass -- 5.3.2 Soil Microbial
Respiration -- 5.3.3 Microbial Metabolic Quotient (qCO₂) -- 5.3.4
Nitrogen Mineralization -- 5.3.5 Other Indicators of Soil Microbial
Biomass -- 5.3.6 Soil Enzyme Activity -- 5.3.7 Microbial Population,
Communities, and Diversity -- 6 Application of Metagenomics
and Microbiome Approaches -- 6.1 Whole-Genome Sequencing
of Coconut PGPR -- 6.2 Metagenomic Studies in Coconut Leaf
Vermicomposting -- 7 Soil Constraints and Their Management -- 7.1
Soil Physical Constraints -- 7.2 Soil Fertility-Related Constraints -- 7.3
Management Strategies for Soil Fertility Constraints -- 7.4 Soil
Contamination-Related Constraints -- 8 Impact of Climate Change
on Coconut Soils -- 9 Fertility Management for Healthy Soils: Fertilizer
Recommendations -- 9.1 Fertigation Studies -- 9.2 Diagnosis
and Recommendation Integrated System Approach -- 9.3 Reference
Soil Values for OM and Inorganic N Approach -- 9.4 Leaf Analysis-
Based Nutrient Management -- 9.5 Customized Nutrient Mixtures
for Coconut -- 10 Technological Options to Promote Soil Health
and Sustainable Agriculture -- 10.1 System Approach -- 10.2
Conservation Agricultural Practices -- 10.3 Cultivation/Tillage -- 10.4
Soil Covering (Mulching) -- 10.5 Crop Diversification -- 10.6 Cover
Cropping and Green Manuring -- 10.7 Alley Cropping of *Glyricidia*
in Coconut -- 10.8 Bioinoculants -- 10.9 Recycling of Coconut
Biomass -- 11 Carbon Sequestration -- 12 Organic Farming Systems.
13 Coconut-Based Integrated Farming System -- 14 Coconut-Based
High-Density Multispecies Cropping System (HDMSCS) -- 15 Future
Strategies -- References -- Oil Palm (*Elaeis guineensis* Jacq) -- 1
Introduction -- 2 The Oil Palm -- 3 General Soil Characteristics
and Requirements -- 4 Indicators of Soil Health and Soil Health
Assessment -- 5 Soil Fertility Constraints -- Issues of Soil
Contamination -- 6 Impact of Climate Change and Plantation Soils --
6.1 Climate Smart Strategies -- 7 Fertility Management for Healthy
Soils: Fertilizer Recommendations -- 7.1 Nutrient Management
in the Nursery -- 7.2 Nutrient Management in the Plantations -- 7.3
Fertilizer Sources -- 7.4 Time and Method of Fertilizer Application --
7.5 Precise Nutrient Management Approaches -- 8 Fertilizers
and Plant Protection Chemicals on Soil Health and Soil Microbiology --
9 Soil Biodiversity and Biological Functions -- 10 Microbiome
and Metagenomic Approach -- 11 Technological Options to Promote
Soil Health -- 11.1 System Approach -- 11.2 Conservation Agriculture
-- 11.3 Crop Residue Recycling -- 11.4 Cover Cropping and Green
Manuring -- 11.5 Bio-fertilizers, Bio-control agents, and Bio-
stimulants -- 11.6 Organic Amendments and Integrated Approaches
-- 11.7 Integrated Nutrient Management -- 11.8 Water Management
-- 11.9 Plant Protection -- 12 Carbon Sequestration -- 13 Organic
Farming Systems -- 14 Future Strategies -- References -- Arecanut
(*Areca catechu* L.) -- 1 Introduction -- 2 Importance of Arecanut --
2.1 Area and Production -- 2.2 History and Uses -- 3 General Soil
Characteristics and Requirements -- 4 Indicators of Soil Health

and Soil Health Assessment -- 4.1 Biological Properties -- 4.2 Chemical Properties -- 4.3 Physical Properties -- 5 Soil Fertility Constraints and Issues of Soil Contamination.

6 Impact of Climate Change on Arecanut Soils -- 7 Fertilizer Recommendations for Healthy Soils -- 8 Organic Farming Approach and Soil Health -- 9 Cropping System Approach and Soil Health Management -- 10 Influence of Fertilizers and Plant Protection Chemicals on Soil Health and Soil Microbiology -- 11 Soil Biodiversity, Microbial Synergy and Function-Specific Microbial Communities -- 12 Application of Microbiome and Metagenomic Approaches -- 13 Soil Health and Management in Yellow Leaf Disease Affected Arecanut Gardens -- 14 Technologies to Promote Soil Health -- 14.1 Cropping and Farming System Approach -- 14.2 Conservation Agriculture Practices -- 14.3 Cover Cropping and Green Manuring -- 14.4 Organic Matter Recycling -- 14.5 Integrated Nutrient Management Approach -- 15 Carbon Sequestration -- 16 Future Strategies --

References -- Spices -- 1 Introduction -- 1.1 Black Pepper -- 1.1.1 Black Pepper-Growing Soils -- 1.1.2 Environmental Factors -- 1.1.3 Issues in Soil Fertility -- 1.1.4 Nutrient Management -- Nutrient Demand -- Nutrient Uptake -- Nutrient Management -- Nutrient Interaction -- Nutrient Deficiencies and Toxicity -- Mineral Fertilizers -- 1.1.5 Management Strategies to Enhance Soil Health -- Organic Manures -- Biofertilizers -- Integrated Nutrient Management -- Organic Management -- Intercropping -- 1.1.6 Soil Biological Properties -- 1.2 Small Cardamom -- 1.2.1 Altitude and Climatic Requirements -- 1.2.2 Soil Requirements -- Chemical Properties of Soils -- Available Micronutrients -- Biological Properties -- 1.2.3 Nutrient Management -- Response to Fertilizers -- Method and Time of Fertilizer Application -- 1.2.4 Management Strategies to Enhance Soil Health -- Soil and Water Conservation -- Biofertilizers -- Cardamom-Based Cropping System -- Integrated Nutrient Management -- 2 Conclusions -- References.

Cashew (*Anacardium occidentale* L.) -- 1 Introduction -- 2 Properties of Soils in Cashew Orchards -- 3 Soil Constraints and Management -- 3.1 Soil Salinity -- 3.2 Soil Acidity -- 4 Fertility Management for Healthy Soils -- 4.1 Nutrient Requirement and Management -- 4.2 Micronutrients -- 4.3 Nutrient Management in High-Density Planting Systems -- 5 Technological Options to Promote Sustainable Soil Health -- 5.1 Cropping Based on Land-Use Capability -- 5.2 Soil and Water Conservation Measures -- 5.2.1 Trenches/Engineering Measures -- 5.2.2 Bioengineering Measures -- 5.3 Intercropping in Cashew Plantation -- 5.4 Use of Organic Manures -- 5.5 Biomass Recycling -- 5.6 Biofertilizers -- 5.7 Integrated Nutrient Management -- 6 Organic Farming in Cashew Plantation -- 7 Awareness on Soil Nutrient Management -- 8 Information and Communication Technologies for Nutrient Management -- 9 Conclusions -- References --

Natural Rubber (*Hevea brasiliensis* Muell Arg.) -- 1 Introduction -- 2 General Soil Characteristics and Requirements -- 3 Indicators of Soil Health and Soil Health Assessment -- 4 Soil Fertility Constraints -- 5 Impact of Climate Change on Plantation Soils (Environmental Impact) -- 6 Fertilizers and Plant Protection Chemicals on Soil Health and Soil Microbiology -- 7 Soil Biodiversity, Microbial Synergy and Function Specific Microbial Communities -- 8 Fertility Management for Healthy Soils: Fertilizer Recommendations -- 9 Technological Options to Promote Soil Health -- 9.1 Intercropping and Cropping System Research -- 9.2 Conservation Agriculture Practices -- 9.3 Crop Residue Recycling -- 9.4 Cover Crops and Green Manuring -- 9.5 Biofertilizer and Biostimulant Technologies -- 9.6 Organic

Amendments and Integrated Approaches -- 10 Carbon Sequestration
-- 11 Organic Farming Systems -- 12 Future Strategies.
References.
