

1. Record Nr.	UNINA9910855390603321
Autore	Mori Koichi
Titolo	Beamed-Mobility Engineering : Wireless-Power Beaming to Aircrafts, Spacecrafts and Rockets
Pubbl/distr/stampa	Singapore : , : Springer, , 2024 ©2024
ISBN	981-9946-18-2
Edizione	[1st ed.]
Descrizione fisica	1 online resource (260 pages)
Collana	Springer Tracts in Electrical and Electronics Engineering Series
Altri autori (Persone)	OdaYasuhisa MasayukiTakahashi ShimamuraKohei
Disciplina	629.11
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Foreword -- Preface -- Contents -- Chapter 1: Wireless Power Transfer Via Microwave for Mobilities -- Introduction -- Review of Microwave Power Transmission to UAVs -- Receiver Systems -- Principle of Rectifier -- High-Frequency Rectifiers (Millimeter Wave) -- Methods of Operating Diodes at High Frequencies -- S and B Band Rectifier Circuits -- Dual-Band Rectifiers -- High-Power Operation Rectifiers -- Tube-Type Rectifier -- Wireless Power Transfer vs. Battery -- Feasibility of Microwave Powered Flight of UAVs -- Beam Collecting Efficiency beam -- Beam Capture Efficiency on Rectenna cap -- Antenna Transmission Efficiency tra and RF-DC Conversion Efficiency RF - DC -- Operation Frequency Dependency: 5.8 GHz vs. 28 GHz -- Flight Demonstration of Microwave Power Transmission with Drone -- Mobilities Design -- Flight Demonstration -- References -- Chapter 2: Microwave Rocket -- What Is a Microwave Rocket? -- Thrust Generation Mechanism of Microwave Rocket -- Thrust Generation Experiment and Performance Trend of Microwave Rocket -- Experimental Application of High-Power Microwave Sources -- Thrust Measurement Experiment and Performance with a Single Pulse -- Millimeter-Wave Plasma in the Thruster -- Multi-Pulse Thrust Generation Experiment and Performance -- Impact on Beam Profile and Frequency -- Demonstration of Microwave Rocket -- Flight Experiment with a Single Pulse -- Flight

Experiment with Multi-Pulse Operation -- Thrust Generation
Experiment of Long-Distance Transmission Type Thruster with Beam
Optical Conversion -- Microwave Rocket System Analysis -- Launch
System Beam Source -- References -- Chapter 3: Laser Propulsion and
Demonstrations -- Pulsed Laser Orbital Launcher -- Introduction --
What Is Pulsed Laser Propulsion? -- Propulsion Principle of the Pulsed
Laser Propulsion System.
Various Vehicle Types and Their Research Trends -- Past Studies of
Pulsed Laser Launch Systems -- Feasibility of Mass Space
Transportation by Laser Propulsion -- Transportation to GEO Via Light
Highway -- Flight Trajectory and Payload Ratio -- Cost Evaluation --
Consideration of Laser Types and Necessary Innovations -- Summary
-- Demonstration of Laser Propulsion and Space Debris Removal
(Demonstration Movie Available) -- Launch Demonstration of Laser-
Driven In-Tube Accelerator (LITA) with Gas Driver -- Launch
Demonstration of Wall-Ablative, Laser-Driven In-Tube Accelerator --
Demonstration of Satellite Spin Breaking Using a TEA CO₂ Laser (2016)
-- Demonstration of Satellite Spin Breaking Using an Nd: YLF Laser
(2021) -- References -- Chapter 4: Spectroscopy of Air Discharge
Plasmas Induced by a Gyrotron Beam -- Introduction -- Optical
Emission Spectroscopy (OES) -- Benefits of OES for the Measurement of
Millimeter-Wave Discharges -- General Remarks on Optical Radiation
of Atoms and Molecules -- Measurement of Electron Number Density
-- Fundamentals of Spectrum Broadening -- Stark Broadening --
Instrumental Broadening -- Natural Broadening -- Doppler Broadening
-- Pressure Broadening (Van der Waals Broadening) -- Practical Use of
Stark Broadening in Millimeter-Wave or Microwave Discharge Plasmas
-- Measurement of Electrons and Gas Temperature -- Fundamentals of
Emission Spectra of Air Discharge Plasmas -- Theoretical Scheme for
Calculating Molecular Band Spectrum -- Practical Use of Molecular Band
Spectrum Analysis for the Temperature Measurement in Air Discharge
Plasmas -- Density and Temperature Measurements in Other Ambient
Gases -- References -- Chapter 5: Experimental Studies of Microwave
Discharge Induced by Gyrotron -- Introduction -- Ionization Threshold
Models -- Microwave Discharge in the Over-Critical Condition.
Microwave Discharge in the Under-Critical Condition -- Summary --
References -- Chapter 6: Modeling and Theoretical Studies on Beamed-
Induced Plasma -- Introduction to Theoretical Studies -- Fluid
Modeling for Overcritical Millimeter-Wave Discharge -- Particle
Modeling for Overcritical Millimeter-Wave Discharge -- Past
Simulations by PIC-MCC Model -- Modeling for Subcritical Discharge --
Numerical Analysis of ``Comb-Shaped`` Structures -- Numerical
Reproduction and Structure Forming Mechanism -- Effect of the
Structure on Ionization-Front Propagation -- One-Dimensional
Consideration of Ionization-Front Propagation in Under-Critical
Condition -- Ionization-Front Propagation with Excited Neutral
Particles Carried via Photons -- Transportation of Excited Neutral
Particles via Photons -- Diffusion Approximation of Transportation of
Electronically Excited Particle via Photons -- One-Dimensional Model
with Simple Assumption -- One-Dimensional Computation --
References -- Chapter 7: Laser-Supported Detonation -- Numerical
Analyses of Laser-Supported Detonation Wave in Air -- Introduction --
Computational Model and Method -- Computational Condition --
Results and Discussion -- Results of the Standard Atmosphere of $p_a = 1 \text{ atm}$ -- Results of the Reduced-Pressure Atmosphere -- Comparison
of the Wave Speeds -- Summary -- Experimental Studies of Laser-
Supported Detonation -- Propagation Velocity of Laser-Supported
Detonation Wave -- Termination Conditions of LSD Wave -- Energy

Conversion Efficiency in LSD -- Summary -- References -- Chapter 8: High-Power Beam Source and Beam Transmission -- Introduction of Electromagnetism -- Features of the Gaussian Beam -- Relationship Between Beam Diameter and Frequency -- Frequency of Electromagnetic Waves and Power Source -- Oscillation Caused by Electric Circuit -- Microwave Electron Tube -- Magnetron -- Klystron -- Gyrotron.

Synchrotron Radiation -- Free-Electron Laser -- Technology for High-Power Beam Source -- Beam Source: Gyrotron Tube -- High-Voltage Power Supply for Gyrotron -- Superconducting Magnet -- Matching Optical Unit -- Auxiliaries -- Technology for High-Power Beam Transmission -- Waveguide -- Miter Bend -- Dummy Load -- Power Selection and Control Equipment -- Example of High-Power Beam Source -- Electronic Cyclotron Heating System for Fusion Plasma -- References -- Chapter 9: Retrodirective Wireless Optical Energy Transmission Using Optical Phase Conjugation -- Atmospheric Disturbance -- Turbulence-Induced Beam Spreading and Beam Wandering -- Wireless Optical Power Transfer Technologies -- Gimbal Tracking -- Adaptive Optics -- Optical Phase Conjugation -- Principles of Optical Phase Conjugation -- Phase-Conjugate Light Generation Technique -- Nonlinear Optical Element -- Digital Phase Conjugation -- References -- Chapter 10: Diode Laser-Sustained Plasma for Continuous-Wave Laser Propulsion -- Introduction -- LSP -- Background of LSP -- Principle of Laser Absorption Process -- Experimental Apparatus -- Results and Discussion -- LSP Generation -- Fluctuation of LSP -- Temperature Measurement -- Fractional Absorption and Radiation Loss -- Conclusion -- References.
