

1. Record Nr.	UNINA9910857787403321
Autore	Spatschek Karl-Heinz
Titolo	Astrophysics : An Introduction to Theory and Basics
Pubbl/distr/stampa	Berlin, Heidelberg : , : Springer Berlin / Heidelberg, , 2024 ©2024
ISBN	3-662-66648-0
Edizione	[1st ed.]
Descrizione fisica	1 online resource (680 pages)
Disciplina	523.01
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Contents -- Part I Introduction to Modern Astrophysics -- 1 Some Important Physical Fundamentals -- Summary -- 1.1 Overview -- 1.2 Orders of Magnitude and Model Areas -- 1.2.1 Spatial and Temporal Scales -- 1.2.2 Forces and Energy Scales -- 1.2.3 Gravitation -- 1.2.4 Model Formation -- 1.3 Astrophysical Structures -- 1.3.1 The Universe as a Whole -- 1.3.2 Virial Theorem -- 1.3.3 Size of Structures -- 1.4 Radiation and Brightness -- 1.4.1 Photons in Equilibrium -- 1.4.2 Brightness and Magnitude Classes -- 1.4.3 Hertzsprung-Russell Diagram -- 1.5 Radiation and Energy Transport -- 1.5.1 Radiation Transport Equation -- 1.5.2 Diffusion Models for Transport -- 1.5.3 Convective Transport -- 2 Observation Opportunities -- Abstract -- 2.1 Classical Methods -- 2.1.1 Methods of Distance Determination -- 2.1.2 Highly Simplified Models for Cepheids -- 2.1.3 Determination of Mass -- 2.1.4 Radius Determination -- 2.1.5 Surface Temperature -- 2.1.6 Velocity Determination -- 2.2 Observation Instruments -- 3 Cosmic Radiation -- Summary -- 3.1 Overview -- 3.2 Acceleration Mechanisms -- 3.2.1 Acceleration through Magnetic Mirrors -- 3.2.2 Fermi Acceleration -- 4 Star Structure and Star Development -- Abstract -- 4.1 Basic Equations for Luminous Stars -- 4.1.1 Star Structure Equations -- 4.1.2 Equations of State -- 4.1.3 Stellar Structure Equations and Virial Theorem -- 4.2 Stellar Energy Sources -- 4.2.1 Basics -- 4.2.2 Fusion Processes in Stars -- 4.3 Our Sun -- 4.3.1 Solar Parameters -- 4.3.2 Transport and Stability -- 4.3.3 Solar Atmosphere -- 4.3.4 Helioseismology -- 4.3.5

Prototype of a Standard Solar Model -- 4.3.6 Solar Neutrinos -- 4.3.7  
 Outlook -- 4.4 Equations of State and Chandrasekhar Mass -- 4.4.1  
 Ideal Classical Gas -- 4.4.2 Ideal Quantum Gases -- 4.4.3 White Dwarfs  
 -- 4.4.4 Polytropic Equations of State -- 4.4.5 Chandrasekhar Mass.  
 4.4.6 Dense Coulomb Systems -- 4.4.7 Neutrons Come Into Play -- 4.5  
 Structure Formation -- 4.5.1 Qualitative Statements -- 4.5.2 Jeans  
 Instability -- 4.6 Star Evolution: Beginnings -- 4.6.1 Development of  
 Protostars -- 4.6.2 Hertzsprung-Russell Diagram -- 4.6.3 Solution of  
 the Stellar Structure Equations -- 4.6.4 Mass Limits -- Lower Mass  
 Limit -- Upper Mass Limit -- 5 Final Stages of Luminous Stars --  
 Abstract -- 5.1 Dying Stars -- 5.1.1 White Dwarfs -- 5.1.2 Neutron  
 Stars -- Pulsars -- 5.1.3 Sources of High-Intensity Radiation --  
 Quasars and Active Galactic Nuclei -- Supernovae and Gamma Ray  
 Bursts -- 5.2 Black Holes -- 6 Galaxies -- Abstract -- 6.1 The Milky  
 Way -- 6.2 General Properties of Galaxies -- 6.2.1 Galaxy Observation  
 -- 6.2.2 Olbers's Paradox -- 6.2.3 Matter Balance -- 6.3 Modeling --  
 Part II Introduction to the General Theory of Relativity -- 7 Calculation  
 Rules of GRT -- Abstract -- 7.1 Mathematical Terminology of SRT --  
 7.1.1 Lorentz Transformation -- 7.1.2 Accelerated Reference Systems  
 -- 7.2 Einstein's Field Equations -- 7.2.1 Principles -- 7.2.2 The Field  
 Equations "Fall From the Sky" -- 7.3 Newtonian Limit Case -- 7.3.1  
 Equation of Motion -- 7.3.2 Determination Equation for the Potential --  
 7.4 Structure of the Einstein Field Equations -- 7.4.1 Mathematical  
 Background -- 7.4.2 The Source Term -- 7.4.3 Covariance of the  
 Equation of Motion -- 7.5 Field Equations and Variational Principle --  
 7.5.1 Metric Determinant -- 7.5.2 Homogeneous Einstein Equations --  
 7.5.3 Energy-Momentum Tensor -- 7.5.4 Cosmological Constant --  
 7.5.5 Notations in Comparison -- 8 GRT Effects -- Abstract -- 8.1  
 Outer Schwarzschild Metric -- 8.1.1 Metric Coefficients -- 8.1.2  
 Particles in the Schwarzschild field -- 8.2 Perihelion Precession of  
 Mercury -- 8.3 Light in the Gravitational Field -- 8.3.1 Light Deflection  
 in the Gravitational Field.  
 8.3.2 Frequency Shift -- 8.3.3 Travel Time Delay -- 8.4 Gravitational  
 Waves -- 8.4.1 Wave equation in matter-free Space -- 8.4.2 Gauge,  
 Polarization and Generation -- 8.4.3 Detection Methods -- 9  
 Relativistic Star Dynamics -- Summary -- 9.1 Relativistic Stellar  
 Equilibria -- 9.1.1 Inner Schwarzschild Metric -- 9.1.2 Relativistic  
 Equilibria -- Oppenheimer-Volkoff Equation with Incompressible Mass  
 Density -- Limits for stationary states -- 9.1.3 Stability -- General  
 Argumentation for Relativistic Stars -- Stability analysis according to  
 Chandrasekhar -- 9.2 Gravitational Collapse -- 9.2.1 Time-Dependent  
 Metrics -- 9.2.2 Time-dependent solutions -- 9.3 Rotating Black Holes  
 -- 9.3.1 Basics -- 9.3.2 Kerr Metric -- 9.3.3 Current Research on Black  
 Holes -- Part III Introduction to Cosmology -- 10 Homogeneous  
 Cosmology -- Summary -- 10.1 Starting Point for Cosmological  
 Approaches -- 10.2 Friedmann-Lemaître Equations -- 10.2.1  
 Robertson-Walker Metric -- 10.2.2 Friedmann-Lemaître Equations --  
 10.2.3 Historical Review -- 10.2.4 Friedmann equation for  $P = 0$  --  
 10.2.5 Friedmann Equation with Three Components -- 10.2.6 Universe  
 with Radiation Dominance -- 10.2.7 Dominance of Matter -- 10.2.8  
 From Radiation to Matter Dominance -- 10.2.9 Cosmography -- 10.3  
 World Models -- 10.3.1 Cosmological Constant -- 10.3.2  
 Schwarzschild-deSitter Space -- 10.3.3 Solutions of the Friedmann-  
 Lemaître Equations -- 11 Primordial Nucleosynthesis -- Abstract --  
 11.1 Basics -- 11.1.1 Building Blocks of the Universe -- 11.1.2 Degrees  
 of Freedom -- 11.2 Thermal development of the young universe --  
 11.2.1 The first fractions of seconds -- Temperature-Age Relationship  
 -- Thermal Equilibrium -- Thermodynamic Quantities -- 11.2.2

Freezing Out of Degrees of Freedom -- Preconditions for Nucleosynthesis from the Lepton Era --  $t = 0.01$  s --  $t = 0.1$  s --  $t = 1$  s --  $t = 3$  min.

11.3 The Universe Becomes "Adult" -- 12 Supernovae Surveys -- Abstract -- 12.1 Distance Measures -- 12.2 Observation Lengths -- 12.3 Evaluations -- 12.3.1 Luminosity Distance and Redshift -- 12.3.2 Observations -- 13 Cosmic Microwave Background Radiation -- Abstract -- 13.1 Observations -- 13.2 First Analyses -- 13.2.1 Temperature and Scale Factor -- 13.2.2 Decoupling Model -- 13.2.3 CMB Horizon Problem -- 14 Inflation -- Abstract -- 14.1 Approaches -- 14.1.1 Conformal Time -- 14.1.2 Phenomenology of Inflation -- 14.2 Inflaton Field in Classical Description -- 14.2.1 Normalizations and Conventions -- 14.2.2 Model -- 14.2.3 Approximate Solution -- 14.2.4 Resolution of Important Cosmological Problems -- 14.2.5 Flatness Problem -- 14.2.6 Monopole Problem -- 15 Inhomogeneous Cosmology -- Abstract -- 15.1 Newtonian Subhorizon Disturbances -- 15.1.1 Jeans Calculation with Expanding Background -- 15.1.2 Jeans Mass -- 15.1.3 Behavior of Dark Matter -- 15.2 Basics of Inhomogeneous Cosmology -- 15.2.1 Disturbed Metric Coefficients -- 15.2.2 Gauge Freedom -- 15.2.3 Perturbed Energy-Momentum Tensor -- 15.2.4 Perturbed Einstein Equations -- 15.3 Information Transfer from the Early Phase -- 15.3.1 Development of the Curvature Disturbance -- 15.3.2 Entry into the Horizon -- 15.3.3 Spectral Distributions -- 15.4 Quantum Fluctuations -- 15.4.1 Relationship between  $\delta$  and  $\delta\rho/\rho$  -- 15.4.2 Subhorizon-like Field Fluctuations -- 15.4.3 Curvature Scalar -- 15.5 Phenomenology -- 15.5.1 Density and Mass Accumulations -- 15.5.2 Galaxy Surveying -- 15.5.3 Fluctuations in the CMB -- 15.5.4 Polarization in the CMB -- References.
