Nota di contenuto	Chapter 1: Why researching climate change discourses in China? -- Chapter 2: Climate change politics, journalism and coverage of China -- Chapter 3: Social constructionism and environmental discourses -- Chapter 4: Mapping climate discourse networks in the coverage of China -- Chapter 5: Dynamic climate change discourses in China -- Chapter 6: Various actors of making climate change discourses -- Chapter 7: Climate change discourse networks in China in 2007, 2009 and 2015 -- Chapter 8: Communicating climate change discourses in China -- Chapter 9: Researching the coming of low carbon discourse.
Sommario/riassunto	This book explores how China's media narrate climate policy and climate change. With the rapid growth of economy and carbon emissions, China has been seen as having a key role in dressing climate change and receives substantial attention from the media. In the Chinese coverage, climate change issues can be interpreted as various concerns and ideas involving the dimensions of the economy, energy and emissions, public involvement, science and ecology, and responsibility. In this sense, a discourse approach can be used to

understand how the newspapers construct the climate change discourse and discourse networks in the coverage. This study selects three different newspapers in China, namely People's Daily, China Daily and Southern Weekend. This book will interest scholars of Chinese politics, environmentalists, and media studies scholars. Dr Sidan Wang is a lecturer at the Institute of International Relations, China Foreign Affairs University. He received his PhD in Politics at the University of Exeter in 2018. His research and teaching courses are around non-traditional security studies, environmental and energy diplomacy, and climate diplomacy. His previous books are *Climate Change Discourse in China* (2022) and *Der Klimawandel-Diskurs in China* (2023).
