

1. Record Nr.	UNINA9910861038603321
Autore	Singh Ravindra Pratap
Titolo	Bionanomaterials for Environmental and Agricultural Applications
Pubbl/distr/stampa	Bristol : , : Institute of Physics Publishing, , 2022 ©2021
ISBN	0-7503-4555-1
Edizione	[1st ed.]
Descrizione fisica	1 online resource (338 pages)
Collana	IOP Ebooks Series
Altri autori (Persone)	SinghKshitij Rb
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Acknowledgements -- Editors biography -- Dr Ravindra Pratap Singh -- Mr Kshitij RB Singh -- List of contributors -- Chapter 1 Introduction: potentialities of bionanomaterials towards the environmental and agricultural domain -- 1.1 Introduction -- 1.2 Utilities of bionanomaterial for agriculture -- 1.3 Utilities of bionanomaterial for the environment -- 1.4 Conclusion and prospects -- Acknowledgment -- References -- Chapter 2 Antimicrobial potentialities: special emphasis on metal and metal oxide-based bionanomaterials -- 2.1 Introduction -- 2.2 Classification of metal and metal oxide-based bionanomaterials and their physicochemical properties -- 2.2.1 Silver-based bionanomaterials -- 2.2.2 Copper-based bionanomaterials -- 2.2.3 Gold-based bionanomaterials -- 2.2.4 Zinc-based bionanomaterials -- 2.2.5 Titanium-based bionanomaterials -- 2.2.6 Nickel-based metal NPs -- 2.3 Synthesis method of metal and metal oxide based bionanomaterial for antimicrobial properties -- 2.3.1 Plants -- 2.3.2 Microorganism -- 2.4 Mechanism of antimicrobial activity through metal and metal oxide-based bionanomaterials -- 2.4.1 General mechanistic pathway of the antimicrobial activity of nanoparticle-based metal and metal oxides -- 2.4.2 Antimicrobial mechanism of various metals and metal oxides -- 2.5 Future prospects and challenges -- 2.6 Concluding remarks and recommendations -- Acknowledgment -- References -- Chapter 3 Bionanocomposites for potential applications in agriculture -- 3.1 Introduction -- 3.2 Major components of a bionanocomposite-natural

polymers -- 3.2.1 Starch -- 3.2.2 Cellulose -- 3.2.3 Lignin -- 3.2.4 Chitin/chitosan -- 3.2.5 Alginate -- 3.2.6 Protein -- 3.2.7 Other biopolymers and synthetically-derived polymers -- 3.3 Bionanocomposites synthesis -- 3.3.1 Solution intercalation -- 3.3.2 In situ intercalation polymerization. 3.3.3 Melt intercalation -- 3.4 Bionanocomposite characterization -- 3.5 Agricultural applications of bionanocomposites -- 3.5.1 Bionanopesticides -- 3.5.2 Food packaging -- 3.5.3 Remediation -- 3.5.4 Bionanosensors -- 3.6 Challenges and opportunities in the usage and design of bionanocomposites -- 3.7 Conclusion -- Acknowledgment -- References -- Chapter 4 Utility of nanobiosensors in agriculture -- 4.1 Introduction -- 4.2 Nanobiosensor applications in agriculture -- 4.2.1 Electrochemical nanobiosensors -- 4.2.2 Optical nanobiosensors -- 4.2.3 Piezoelectric nanobiosensors -- 4.3 Conclusion and prospects -- Acknowledgments -- References -- Chapter 5 Role of biopesticides derived from bionanomaterials for enhanced food security and sustainable agriculture -- 5.1 Introduction -- 5.2 Utilization of bionanomaterials for valorization of several agricultural wastes -- 5.3 Utilization of bionanomaterials as bioherbicides -- 5.4 Application of bionanomaterials as biostimulators -- 5.5 Application of bionanomaterials as bioinsecticides -- 5.6 Application of bionanomaterials from plants in remediation of pesticides -- 5.7 Conclusion and future recommendations -- Acknowledgment -- References -- Chapter 6 Bionanoformulations: special emphasis on agricultural crop protection and growth -- 6.1 Introduction -- 6.1.1 Global scenario and challenges in agriculture -- 6.1.2 Nanotechnological interventions in agriculture -- 6.1.3 What are bionanoformulations -- 6.1.4 Significance of bionanoformulations -- 6.2 Different types/materials used for bionanoformulations synthesis -- 6.2.1 Cellulose nanoparticles and their derivatives -- 6.2.2 Dextran nanoparticles and their derivatives -- 6.2.3 Chitosan and carrageenan nanoparticles -- 6.2.4 Starch nanoparticles -- 6.2.5 Gelatin nanoparticles -- 6.3 Different approaches and methods for bionanoformulations synthesis. 6.3.1 Top-down approach -- 6.3.2 Bottom-up approach -- 6.3.3 Methods of bionanoformulations synthesis -- 6.4 Examples and current status of bionanoformulations for crop protection and growth -- 6.5 Advantages and disadvantages of bionanoformulations -- 6.6 Gaps in agriculture crop protection -- 6.7 Future prospects of bionanoformulations in agriculture -- 6.8 Conclusion -- Acknowledgment -- References -- Chapter 7 Utility of metal oxide-based bionanocomposites for wastewater treatment -- 7.1 Introduction -- 7.2 Chitosan based metal oxide bionanocomposites -- 7.3 Cellulose based metal oxide nanobiocomposite -- 7.4 Guar gum based metal oxide bionanocomposite -- 7.5 Clay based bionanocomposites -- 7.6 Conclusion and prospects -- Acknowledgment -- References -- Chapter 8 Utility of bionanocomposites for wastewater treatment -- 8.1 Introduction -- 8.2 HMs and their toxicity -- 8.3 Nanomaterials as sorbents for wastewater treatment -- 8.4 BNCs as a sorbent for wastewater treatment -- 8.5 Factors affecting sorption of HMs using BNCs -- 8.5.1 Effect of pH -- 8.5.2 Effect of sorbent dosage -- 8.5.3 Effect of contact time -- 8.6 Mechanism of sorption of HMs using BNCs -- 8.6.1 Isotherms models -- 8.6.2 Kinetic models -- 8.6.3 Thermodynamics -- 8.7 Conclusion and prospects -- Acknowledgement -- References -- Chapter 9 Potentialities of bionanocomposite hydrogels for wastewater treatment -- 9.1 Introduction -- 9.2 Bionanocomposite hydrogels -- 9.3 Adsorptive removal of aqueous contaminants by bionanocomposite hydrogels --

9.4 Biopolymers in nanocomposite hydrogels -- 9.4.1 Cellulose based BNCHs -- 9.4.2 Chitosan based BNCHs -- 9.4.3 Pectin based nanocomposite hydrogels -- 9.4.4 Carrageenan based nanocomposite hydrogels -- 9.5 Removal of heavy metals in aqueous solution -- 9.6 Removal of organic dyes in aqueous solution -- 9.7 Conclusions -- 9.8 Future prospects.

Acknowledgement -- References -- Chapter 10 Bionanomaterials utility in food industry and its challenges -- 10.1 Introduction -- 10.2 Bionanomaterials applications in food industry -- 10.2.1 New product formulations -- 10.2.2 Nanoencapsulation of functional components -- 10.2.3 Biosensing for food safety -- 10.2.4 Bionanomaterials for food packaging -- 10.3 Challenges and regulatory issues -- 10.4 Conclusion and prospects -- Acknowledgment -- References -- Chapter 11 Polymeric bionanomaterials for agricultural and environmental applications -- 11.1 Introduction -- 11.1.1 Preparation techniques -- 11.1.2 Surface modifications -- 11.1.3 Physicochemical properties and characterizations -- 11.2 Applications of polymeric bionanomaterials -- 11.2.1 Agricultural applications -- 11.2.2 Environmental applications -- 11.3 Conclusions -- 11.4 Challenges and future trends -- Acknowledgments -- References -- Chapter 12 Role of bionanomaterials for environmental remediation -- 12.1 Introduction -- 12.2 Synthesis of bionanomaterials -- 12.3 Environmental remediation by bionanomaterials -- 12.3.1 Adsorption -- 12.3.2 Catalytic transformation -- 12.3.3 Advanced oxidation process -- 12.3.4 Antimicrobial activities -- 12.4 Nanobiosensors for environmental monitoring -- 12.5 Conclusion and prospects -- Acknowledgment -- References -- Chapter 13 Nanobiosensors for environmental risk assessment -- 13.1 Introduction -- 13.2 Nanobiosensors -- 13.2.1 Components of nanobiosensors -- 13.3 Nanobiosensors in environmental monitoring -- 13.3.1 Detection of pesticides -- 13.3.2 Detection of pathogens -- 13.3.3 Detection of antibiotics -- 13.3.4 Detection of metals and heavy metals -- 13.4 Nanobiosensors for the detection of toxin pollutants -- 13.4.1 Endocrine disrupting chemicals -- 13.4.2 Phenolic pollutants. 13.5 Plant biology and agriculture: What functions for nanobiosensors? -- 13.5.1 Nanobiosensors for soil-plant systems -- 13.5.2 Nanopesticides -- 13.5.3 Nanofertilizers -- 13.5.4 Herbicides -- 13.5.5 Fungicides -- 13.6 Environmental risk assessment: what is needed? -- 13.7 Challenges and future perspectives -- 13.8 Conclusion -- Acknowledgment -- References -- Chapter 14 Developments, utilization and applications of nanobiosensors for environmental sustainability and safety -- 14.1 Introduction -- 14.2 Overview on the mechanisms of biosensors -- 14.2.1 Components and mechanism of action of biosensors -- 14.2.2 Categories of biosensors -- 14.3 Developments of NNBs mechanisms for ESS -- 14.4 Utilization and applications of NNBs mechanisms for ESS -- 14.5 Conclusion and future prospects of NNBs mechanisms for ESS -- Acknowledgement -- References.

Sommario/riassunto

Providing an extensive review of the latest research, this book explores the prospects and limitations of using bionanomaterials in a range of environmental and agricultural applications. It is an invaluable reference for scientists, researchers and academics working in the fields of biomaterials, bionanotechnology, environmental science and agriculture, and an excellent introduction for students.
