## Sommario/riassunto

The immune system is highly complex, it senses foreign invaders, thus protecting the body. The adaptive arm of the immune system confers long-term protection, whereas the innate immune system confers immediate protection. In the case of the immune system, the pattern recognition receptors offer various modes of sensing the molecular patterns associated with pathogens. Toll-like receptors (TLRs) are important mediators of inflammatory pathways in the gut which play a major role in mediating the immune responses towards a wide variety of pathogen-derived ligands and link adaptive immunity with the innate immunity. This book covers the role of TLRs in several vector-borne Diseases. Starting with an introduction to these diseases, the book explains the different types of receptors involved in these diseases. The diseases are then covered in separate chapters, including: malaria, lymphatic filariasis, visceral leishmaniasis, dengue fever, chikungunya, West Nile fever, and Japanese encephalitis. The book is a handy reference for researchers and trainees involved in clinical medicine and infection control. It can also serve as supplementary reading material for Students undertaking courses in biotechnology, public health, entomology, immunology, epidemiology, and life sciences.

## Sommario/riassunto

This anthology provides an in-depth analysis and discusses the issues surrounding nudging and its use in legislation, regulation, and policy making more generally. The 17 essays in this anthology provide startling insights into the multifaceted debate surrounding the use of nudges in European Law and Economics. Nudging is a tool aimed at altering people's behaviour in a predictable way without forbidding any option or significantly changing economic incentives. It can be used to help people make better decisions to influence human behaviour without forcing them because they can opt out. Its use has sparked lively debates in academia as well as in the public sphere. This book explores who decides which behaviour is desired. It looks at whether or not the state has sufficient information for debiasing, and if there are clear-cut boundaries between paternalism, manipulation and indoctrination. The first part of this anthology discusses the foundations of nudging theory and the problems associated, as well as outlining possible solutions to the problems raised. The second part is devoted to the wide scope of applications of nudges from contract law, tax law and health claim regulations, among others. This volume is a result of the flourishing annual Law and Economics Conference held at the law faculty of the University of Lucerne. The conferences have been instrumental in establishing a strong and ever-growing Law and Economics movement in Europe, providing unique insights in the challenges faced by Law and Economics when applied in European legal traditions.
