Titolo	Age-Adjusted Psychiatric Treatment for the Older Patient // edited by Howard H. Fenn, James A. Bourgeois, Catharine Birtley Fenn
Pubbl/distr/stampa	Cham : , : Springer Nature Switzerland : , : Imprint : Springer, , 2024
ISBN	3-031-53976-1
Edizione	[1st ed. 2024.]
Descrizione fisica	1 online resource (344 pages)
Disciplina	618.97689
Soggetti	Psychiatry Geriatrics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Introduction -- Section I: Foundations of evaluation and treatment -- Chapter 01: Geriatric Pharmacology Overview -- Chapter 02: Essential Medical Evaluation -- Chapter 03: Laboratory studies, neuroimaging, and neuropsychological testing -- Section II: Neurocognitive disorders -- Chapter 04: Neuropsychiatric symptoms (NPS) and Neurocognitive disorders -- Chapter 05: Delirium -- Section III: Psychiatric syndromes -- Chapter 06: Substance Use Disorders -- Chapter 07: Sleep -- Chapter 08: Psychotic symptoms and syndromes -- Chapter 09: Anxiety Disorders -- Chapter 10: Depressive disorders -- Chapter 11: Bipolar and Related Disorders -- Chapter 12: Trauma- and Stressor-Related Disorders -- Section IV: Therapeutics and interventions -- Chapter 13: Neuromodulation Therapies -- Chapter 14: Psychotherapeutic interventions -- Chapter 15: Telemedicine and Digital Mental Health Technologies -- Section V: Special topics -- Chapter 16: Medical-Legal Topics -- Chapter 17: Nutraceuticals, Dietary, and Herbal Supplements.
Sommario/riassunto	This book offers practical age-adjusted recommendations to treat the most common psychiatric symptoms and syndromes in the geriatric patient. The principles described here are not new; advice for prescribing to the aging patient has always been to “start low, go slow.” This book fleshes out that dictum based on research evidence, clinical experience, and trends in the literature. An age-adjusted approach endorses medication interventions when needed as part of a

comprehensive treatment plan. A combination of psychotherapeutic interventions, non-pharmacological modalities, and judiciously managed medications can improve quality of life and minimize risks inherent in pharmacotherapy applied to aging physiology. Age-Adjusted Psychiatric Treatment for the Older Patient is divided into five sections, covering the foundations of evaluation and treatment, neurocognitive disorders, psychiatric syndromes, therapeutics and interventions, and special topics. Each chapter begins with a complex case example that illustrates the topic. It then reviews current evidence-based evaluation and treatments. Age-adjusted recommendations, distilled from the literature, are offered at the end of each chapter. The intent is to provide actionable advice to supplement, but not supplant, good clinical judgement, which can improve quality of life by managing psychiatric symptomatology while averting untoward results. This volume is an essential guide for experienced clinicians as well as trainees across many health care disciplines, both generalists and geriatric specialists, who all see increasing numbers of aged patients with psychiatric symptomatology.

Sommario/riassunto

This volume investigates the functional-semantic field of aspectuality in relation to the role of language contact in the development of minority languages in Italy and beyond, highlighting hitherto completely unknown parallels, e.g. contact-induced development of progressive and prospective verbal periphrases. The influences of the dominant languages surface not only in Slavic derivational verbal aspect, but also in the restructuring of morphosyntactic reflexes of aspect. Aspectuality is examined in relation to Slavic micro-languages spoken in Italy (Molise Slavic, Resian, Tersko, Nadisko), Austria (Burgenland Croatian), Germany (Upper Sorbian), Albania (Kaj-nas) and the Baltic, as well as in relation to Arbëresh, Cimbrian, Griko, Lithuanian and Macedonian.
