Sommario/riassunto

The book delves into the role of biosimilars in the field of cancer treatment. It also discusses the application of biosimilars in various cancer types, from colorectal and cervical to prostate, gastric, lung, pancreatic, breast, hepatocellular, ovarian, and blood cancers. It contains chapters that focus on the clinical trials of biosimilars, providing insights into the latest research and developments. This book serves as a valuable resource for clinicians, researchers, and anyone seeking a comprehensive understanding of the intersection between biosimilars and cancer treatment.
