

1. Record Nr.	UNINA9910315238103321
Autore	Gourio Anne
Titolo	Chants de pierres / / Anne Gourio
Pubbl/distr/stampa	Grenoble, : UGA Éditions, 2018
ISBN	2-37747-127-7
Descrizione fisica	1 online resource (431 p.)
Disciplina	841/.910936
Soggetti	French poetry - 20th century - History and criticism Stone in literature Mineralogy in literature Poesie française - 20e siècle - Histoire et critique Pierre dans la littérature Minéraux dans la littérature
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	« Si j'ai du goût ce n'est guères/que pour la terre et les pierres. » Comme pour reprendre le pas de Rimbaud, la poésie des années 50 et 60 s'élance dans un paysage semé de rocs, de cailloux, de rocaillie. Et bientôt la pierre devient l'élément privilégié vers lequel se porte, de Guillevic à Bonnefoy et Du Bouchet, de Char à Dupin et Gaspar, l'imaginaire poétique de toute une époque. Constat abrupt d'une déshumanisation du monde ? Nostalgie de l'immémorial ? Recherche du simple et refus de l'image ? La pierre brute se fait le miroir des enjeux historiques, philosophiques, sémiotiques, d'une poésie confrontée à l'évidence d'immenses champs de ruines. Cette étude entreprend l'archéologie de cet imaginaire. Elle vise à dégager l'origine du motif et à souligner le tracé de son évolution. Et aussitôt une question s'impose : pourquoi et comment est-on passé de la pierre précieuse, ce cœur de l'esthétique symboliste et de la poétique mallarméenne, à la pierre nue des poètes de l'après-guerre ? Hasard ? Continuité cachée ? Entre symbolisme, surréalisme et poésie moderne, des filiations se dessinent, une géologie imaginaire se dégage, une histoire des poétiques se redéfinit. Et le XXe siècle devient la chambre d'échos où se déploient,

dans la richesse de leur diversité, les chants de pierres de notre modernité.

Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Chapter 1: Brief recognition history of Echinococcus tapeworm -- Chapter 2: Global epidemiology of echinococcosis: current status and future prospects -- Chapter 3: Alveolar and cystic echinococcosis in Central Europe: epidemiology, diagnosis, therapy and prophylaxis -- Chapter 4: Echinococcosis in China: epidemiology, burden of disease and economic impacts -- Chapter 5: Biology and hosts of Echinococcus species in China -- Chapter 6: Echinococcosis immune response, immunopathogenesis and immune evasion from the human host -- Chapter 7: Pathology and clinical features of echinococcosis -- Chapter 8: Diagnosis of echinococcosis: parasitological, immunological, and molecular tools -- Chapter 9: Light and electron microscopical aspects

of stages of Echinococcus species around the world -- Chapter 10: CT and MR features of echinococcosis -- Chapter 11: Ultrasound in diagnosis of echinococcosis -- Chapter 12: Current treatments for echinococcosis: what we have -- Chapter 13: Novel chemotherapeutical approaches against echinococcosis - a Swiss view -- Chapter 14: Cross- and multidisciplinary interventions used for echinococcosis control.

Sommario/riassunto

This volume provides a comprehensive overview of human echinococcosis, a zoonotic disease caused by tapeworm parasites of the genus Echinococcus. Both cystic- (hydatid disease) and alveolar echinococcosis are included, covering the most important disease forms of medical and public health relevance. Presented findings focus China and Europe and are at the same time of global significance for clinical management and control programs under the One Health approach. Echinococcosis is a relevant neglected tropical disease (NTD) and targeted for elimination by the WHO as a public health problem. The present book aids the critical actions for understanding the disease and its surveillance. In addition to fundamental information on tapeworm epidemiology, biology and immunopathogenesis, the chapters spotlight details on ultrasound diagnosis and staging, CT and MRI imaging. Moreover, molecular diagnostic tools, novel chemotherapeutics, and current vaccine research are discussed. The book is a valuable resource for human and veterinary medicine considering the Sustainable Development Goals research (SDG 3: Good Health and Well-being). Scientists, students, and medical professionals will find significant content on animal reservoirs, parasite transmission, prevention and treatment options.
