

1. Record Nr.	UNINA9910872438203321
Titolo	1998 13th Annual Battery Conference on Applications and Advances
Pubbl/distr/stampa	[Place of publication not identified], : IEEE, 1998
Descrizione fisica	1 online resource (360 pages)
Disciplina	621.31242
Soggetti	Electric batteries
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Nota di contenuto	<p>Thirteenth Annual Battery Conference on Applications and Advances. Proceedings of the Conference -- Recent advances in zinc/air batteries -- Ongoing tests of the Electric Fuel/sup (R)/ zinc-air battery for electric vehicles -- Advanced Ovonic high-power nickel-metal hydride batteries for hybrid electric vehicle applications -- Development of high power nickel-cadmium batteries for hybrid vehicles -- Performance of valve-regulated lead acid batteries in EV1 extended series strings -- The development of lithium-ion secondary battery systems for EV and HEV -- The use of advanced batteries for meeting California's ZEV requirement -- Gassing characteristics of high capacity, high energy density rechargeable silver zinc cells -- Performance characterization of special separation rechargeable silver-zinc cells -- Zinc-air batteries for field charging -- Analysis of light and dark areas on nickel-hydrogen plates -- Chemical analysis of thermal battery components -- Development of Li/MnO/sub 2/ pouch cell batteries for man-portable military communications-electronics equipment -- Wearable lithium-ion polymer batteries for military applications -- Nickell cadmium batteries in aircraft application -- Development and experimental results of continuous coating technology for lithium-ion electrodes -- Hybrid power sources for military applications -- Performance comparison between Ni-H/sub 2/ dry sinter and slurry electrode cells -- Effect of storage on performance of SUPER nickel-cadmium cells -- Lunar Prospector 5 Ah Super NiCd battery performance characteristics -- Lithium-ion batteries based on overlithiated LiMn/sub 2/O/sub 4/ -- Hybrid battery and flywheel</p>

energy storage system for LEO spacecraft -- Battery testing facility-  
improving performance -- Heat effects in batteries and measurements  
by electrochemical calorimetry.
