Exploring upper secondary school students' expectations and perceptions of value in is outreach programs -- Ontology-based Digital Twin Framework Using Contextual Affordances for Worker Assistance in Smart Factories -- Enriched Discretisation: Information Fusion from

Supervised and Unsupervised Processing -- The Neural Network Regression Model Supported by Multi-Criteria Methods for Ranking Prediction in Sustainable Development Assessment -- Emerging Trends in XR-mediated Virtual Team Collaboration in Digital Workspaces: A Systematic Literature Review.

Sommario/riassunto

This volume is a collection of papers on emerging concepts, significant insights, and novel approaches to Information Systems Development (ISD). It delves into the latest trends in ISD and examines how organizational goals, structure, and the business environment--including regulations and societal trends--can impact the creation and implementation of information systems. The book draws on invited papers selected from the proceedings of the 31st International Conference on Information Systems Development hosted by Instituto Superior Técnico, Lisbon, Portugal, on August 30-September 1, 2023 (ISD2023). The general theme of ISD2023 was "Information Systems Development, Organizational Aspects, and Societal Trends". This volume is specifically designed for researchers who are interested in exploring the methodological and operational perspectives of Information Systems Development, as well as the impact of organizational aspects and societal trends. The primary target audience for this volume is those who want to deepen their understanding of ISD from both theoretical and practical perspectives.
