

1. Record Nr.	UNINA9910874672503321
Autore	Wang Jie
Titolo	Encountering Mobile Data Dynamics in Heterogeneous Wireless Networks
Pubbl/distr/stampa	Cham : , : Springer, , 2024 ©2024
ISBN	9783031629068 9783031629051
Edizione	[1st ed.]
Descrizione fisica	1 online resource (187 pages)
Altri autori (Persone)	WangWenye WangXiaogang
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Intro -- Preface -- Acknowledgment -- Contents -- Acronyms -- 1 Introduction -- 1.1 Motivation -- 1.1.1 Data Is Alive and Mobile -- 1.1.2 Mobile Data Dynamics in Heterogeneous Wireless Networks -- 1.1.2.1 Information Dynamics: The Driving Force of Mobile Data -- 1.1.2.2 Coverage Dynamics: The Whereabouts of Mobile Data -- 1.1.2.3 Spectrum Dynamics: Impact of Mobile Data in the Spectrum Domain -- 1.1.2.4 Network-Data Interaction: Governing Rules of Mobile Data -- 1.2 Contents of This Book -- 1.2.1 Information Dynamics: When Data Start and Stop Moving -- 1.2.2 Coverage Dynamics: Where Data Are during Dissemination -- 1.2.3 Governing Rules: How Data Move during Offloading -- 1.2.4 Spectrum Dynamics: What Observable Impact Mobile Data Cause -- 1.3 Organization of This Book -- References -- 2 Information Dynamics: Modeling and Analysis of Conflicting Information Propagation in a Finite Time Horizon -- 2.1 Motivation and Related Work -- 2.1.1 Motivating Examples in Different Systems -- 2.1.1.1 Rumor vs. Truth in OSN -- 2.1.1.2 Advanced Product vs. Outdated Product in Word-of-Mouth Networks -- 2.1.1.3 Malware vs. Security Patch in Institutional Computer Networks and Faults vs. Restoration Commands in IoT -- 2.1.2 Related Work -- 2.1.3 Our Approach and Contributions -- 2.2 Preliminaries and Problem Statement -- 2.2.1 Conflicting Information Pair: Virus x and Antidote

ax -- 2.2.2 Network $G(V,E)$ -- 2.2.3 Epidemic Propagation Process --
2.2.3.1 State Transitions -- 2.2.3.2 Propagation Rules -- 2.2.4 Problem
Formulation -- 2.3 Lifetime of the Undesired Information in Networks
with Simple Topologies -- 2.3.1 Bounds for Complete Networks K_n --
2.3.2 Bounds for Star Networks S_n -- 2.3.3 Numerical Simulation and
Discussion -- 2.4 Lifetime of the Undesired Information in Networks
with Arbitrary Topologies -- 2.4.1 Bounds by Considering the Edge-
Expansion Property.
2.4.2 Bounds by Considering Vertex Eccentricity -- 2.4.3 Validation in
Synthetic and Real-World Networks -- 2.5 Divide-and-Conquer:
Leveraging Topology to Control Undesired Information -- 2.5.1
Topology-Based Antidote Distribution -- 2.5.2 Ideal Antidote
Distribution Policy -- 2.5.3 Practical Approaches -- 2.5.4 Numerical
Results and Discussion -- 2.6 Dynamics in Motion: Estimating the
Number of Information Adopters at Time t -- 2.6.1 Temporal
Dependence -- 2.6.2 Spatial Dependence -- 2.6.3 Expected Infection
Count $E(I(t))$ and Cured Count $E(C(t))$ -- 2.7 Summary -- References -- 3
Coverage Dynamics: Modeling and Analysis of Data Coverage in
Heterogeneous Edge Networks -- 3.1 Motivation and Related Work --
3.1.1 Motivation -- 3.1.2 Related Work -- 3.1.3 Our Approach and
Contributions -- 3.2 Problem Formulation -- 3.2.1 Scope of the
'Where' Problem -- 3.2.2 Entity Model -- 3.2.2.1 Attributes of Entity e
-- 3.2.2.2 Actions -- 3.2.3 Data Coverage and Coverage Dynamics --
3.3 Representing Coverage Dynamics with Graph Signals -- 3.3.1 A
Location-Centric Measure: Data-Strength -- 3.3.2 State Transitions of
a Single Entity -- 3.3.3 Evolution of the Dynamics via Data-Strength
Vector s_t -- 3.3.3.1 User Mobility Component -- 3.3.3.2 Data
Dissemination Component -- 3.3.4 Preliminaries on Graph Signal
Processing (GSP) -- 3.3.4.1 Graph Fourier Transform (GFT) and
Spectrum of a Graph Signal -- 3.3.4.2 Time-Vertex Process and
Stationarity -- 3.4 Information from a Snapshot -- 3.4.1 A Simple
Homogeneous Scenario -- 3.4.2 Impact of Mobility -- 3.4.2.1 Weighted
Adjacency Matrix W_t of G -- 3.4.2.2 Mobility Dependence
Index (MDI) -- 3.4.2.3 Simulation Configuration -- 3.4.2.4
Observations -- 3.5 Summary -- References -- 4 Governing Rules:
Modeling and Analysis of Task Offloading Processes in the Fog -- 4.1
Motivation and Related Work.
4.1.1 Fog Emerges on the Edge: Remedy or Resource Drain? -- 4.1.2
Related Work -- 4.1.3 Our Approach and Contributions -- 4.2 System
Model and Problem Formulation -- 4.2.1 Network Model -- 4.2.1.1
Node Model -- 4.2.1.2 Communication Model -- 4.2.2 Task Model --
4.2.3 Performance Metrics through Data Movements -- 4.3 How Data
Move: The Gravity Model for Task Offloading -- 4.3.1 An Offloading
Procedure Under Gravity Rule -- 4.3.2 Typical and Generic Gravity
Rules -- 4.3.2.1 Distance-Oriented Gravity Rule -- 4.3.2.2 Delay-
Oriented Gravity Rule -- 4.3.2.3 Energy-Oriented Gravity Rule --
4.3.2.4 Generic Form of the Gravity Function -- 4.3.3 Offloading
Probability Under the Generic Gravity Rule -- 4.4 Bounds and Scaling
Laws of Performances -- 4.4.1 Expected Queuing Delay $E(TQ|n)$ --
4.4.2 Device Effort and Network Effort -- 4.4.2.1 Distance-Oriented
Offloading -- 4.4.2.2 Delay-Oriented Offloading -- 4.5 Numerical
Results and Discussions -- 4.5.1 Describing an Offloading Scheme with
the Gravity Model -- 4.5.2 Comparison with Existing Offloading
Schemes -- 4.5.2.1 Single Criterion -- 4.5.2.2 Multiple Criteria --
4.5.3 Gravity Model as an Offloading Scheme -- 4.6 Summary --
References -- 5 Spectrum Dynamics: Modeling, Analysis, and Design of
Spectrum Activity Surveillance in DSA-Enabled Systems -- 5.1
Motivation and Related Work -- 5.1.1 Motivation -- 5.1.2 Related Work

-- 5.1.3 Our Approach and Contributions -- 5.2 Problem Formulation
-- 5.2.1 System Model -- 5.2.1.1 Spectra of Interest S -- 5.2.1.2 The Spectra-Location Space X -- 5.2.1.3 Surveillance Model -- 5.2.1.4 Exploit Model -- 5.2.1.5 Switching Model -- 5.2.2 Performance Metrics -- 5.2.3 SAS Strategy Design Problem -- 5.3 A Two-Step Solution -- 5.3.1 Space Tessellation: Reducing the Solution Space -- 5.3.1.1 Solution to the Space-Tessellation Problem. 5.3.1.2 Exploit Patterns of Culprits in Assignment Space V -- 5.3.2 Graph Walk: A Chain of Switching Actions -- 5.3.2.1 Range Aspect (Switching Capacity) -- 5.3.2.2 Time Aspect (Switching Rates) -- 5.3.2.3 A Graph Walk on Composite Graph (GM, GR) -- 5.4 Deterministic SAS Strategies for Dedicated Monitors -- 5.4.1 Low Cost Deterministic Strategies fS -- 5.4.2 Detection Time of the Deterministic Strategy fS -- 5.4.2.1 Detecting Persistent Culprits R_p -- 5.4.2.2 Detecting an Adversary Culprit R_a -- 5.5 Patching the 'Wandering Hole': Randomized Strategies -- 5.5.1 Randomized SAS Strategies -- 5.5.2 Coverage Time of the Two Randomized Strategies f_l and f_D -- 5.5.2.1 Coverage Time of the I-Strategy T_{Im} -- 5.5.2.2 Coverage Time of the D-Strategy T_{Dm} -- 5.5.2.3 Numerical Validation -- 5.5.3 Bounded Detection Time of Adversarial Culprits -- 5.6 SAS with Limited Switching Capacities -- 5.6.1 Performance Analysis Through Regular Graph Approximation -- 5.6.1.1 Coverage Time T_{rMm} -- 5.6.1.2 Detection Time $R(rR, rM)$ -- 5.6.2 Gap Between (GM, GR) and Approximation (GrM, GrR) -- 5.6.3 Numerical Results -- 5.7 Summary -- References -- 6 Conclusion and Future Directions -- 6.1 Recap of Key Findings on Mobile Data Dynamics -- 6.2 Emerging Trends on Edge Intelligence -- References.
