

1. Record Nr.	UNINA9910875594203321
Autore	Huang Jing
Titolo	Porous Carbon Materials for Clean Energy
Pubbl/distr/stampa	Boca Raton : , : Taylor & Francis Group, , 2024 ©2025
ISBN	1-04-011710-4 1-003-38783-7
Edizione	[1st ed.]
Descrizione fisica	1 online resource (285 pages)
Altri autori (Persone)	HuangJing
Disciplina	621.31/50284
Soggetti	Supercapacitors - Materials Carbon nanotubes Porous materials Electrocatalysis - Materials Energy storage - Materials Storage batteries - Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Cover -- Half Title -- Series Page -- Title Page -- Copyright Page -- Table of Contents -- Contributors -- Chapter 1 Porous Carbon Aerogel for Supercapacitors -- Chapter 2 Porous Carbon-Based Materials for Supercapacitors -- Chapter 3 Biomass-Derived Materials Toward Low-Carbon Hydrogen Production -- Chapter 4 Biomass-Derived Carbon Materials for Microbial Fuel Cell Anodes -- Chapter 5 Biomass-Derived Graphene-like Carbon Materials for Supercapacitor Applications -- Chapter 6 Biomass-Derived Porous Carbon Materials for Supercapacitors -- Chapter 7 Carbon-Based Fibers for Supercapacitors -- Chapter 8 Supercapacitors for Energy Storage: Fundamentals, Electrode Materials, and Application -- Chapter 9 Preparation, Structure Control, and Electrochemical Performance of Electrospun Carbon Nanofiber (CNF) -- Chapter 10 Porous Carbon from Biomass for Supercapacitor -- Chapter 11 Porous Carbonaceous Materials for Supercapacitors -- Index.
Sommario/riassunto	New carbon materials have been developed to meet challenges of a

growing global demand for energy-saving materials and sustainable materials. This book describes progress towards the conversion and efficient utilization of porous carbon and its derived precursor as electrode materials for clean energy.
