

1. Record Nr.	UNINA9910876652803321
Titolo	Fatigue of materials and structures // edited by Claude Bathias, Andre Pineau
Pubbl/distr/stampa	London, : ISTE Hoboken, : Wiley, 2010
ISBN	1-118-62343-6 1-299-31512-7 0-470-39401-3 1-61344-816-3
Descrizione fisica	1 online resource (527 p.)
Collana	ISTE ; ; v.53
Altri autori (Persone)	BathiasClaude PineauA (Andre)
Disciplina	620.1/12
Soggetti	Materials - Fatigue Materials - Mechanical properties Microstructure
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Cover; Fatigue of Materials and Structures; Title Page; Copyright Page; Table of Contents; Foreword; Chapter 1. Introduction to Fatigue: Fundamentals and Methodology; 1.1. Introduction to the fatigue of materials; 1.1.1. Brief history of fatigue: its technical and scientific importance; 1.1.2. Definitions; 1.1.3. Endurance diagrams; 1.2. Mechanisms of fatigue damage; 1.2.1. Introduction/background; 1.2.2. Initiation of fatigue cracks; 1.2.3. Propagation of fatigue cracks; 1.3. Test systems; 1.4. Structural design and fatigue; 1.5. Fatigue of polymers, elastomers and composite materials 1.6. Conclusion 1.7. Bibliography; Chapter 2. Modeling of Fatigue Strength and Endurance Curve; 2.1. Introduction; 2.2. Nature and aspect of the scatter of fatigue test results; 2.3. Determination of the endurance limit; 2.4. Estimation methods of fatigue resistance and standard deviation with N cycles; 2.4.1. Probit method; 2.4.2. Staircase method; 2.4.3. Iteration method; 2.4.4. Non-failed specimen method; 2.4.5. Choice of test method; 2.5. Mathematical representations and

plotting methods of the Wohler curve; 2.5.1. Introduction; 2.5.2. Mathematical representation of the Wohler curve
2.5.3. Adjustment methods of a Wohler curve to test results
2.6. Estimation of the cycle number N for a given level of stress amplitude;
2.6.1. Principle; 2.6.2. Set-up; 2.6.3. Application; 2.7. Influence of mechanical parameters on endurance; 2.7.1. Influence of the mean stress; 2.7.2. Influence of the nature of forces; 2.8. Relationship between endurance and mechanical characteristics (of steels); 2.8.1. Estimations of D; 2.8.2. Estimation of standard deviations; 2.8.3. Conclusion; 2.9. Bibliography; Chapter 3. Fatigue Crack Initiation; 3.1. Introduction
3.2. Physical mechanisms of crack initiation
3.2.1. Three stages of fatigue failure: a reminder; 3.2.2. Influence of stress amplitude; 3.3. Methods of evaluating crack initiation; 3.3.1. Smooth specimens; 3.3.2. Notch effect; 3.4. Practical method of structure calculation; 3.4.1. Preliminary; 3.4.2. The problem to be solved; 3.4.3. Initiation parameters; 3.4.4. The master Wohler curve ($kt = 1$); 3.4.5. Cumulative damage ($kt = 1$); 3.4.6. Specimens with $kt > 1$: correspondence curve; 3.4.7. Use of correspondence curves; 3.4.8. Plotting the correspondence curves; 3.4.9. Comments and conclusion
3.5. Bibliography
Chapter 4. Low-cycle Fatigue; 4.1. Introduction; 4.1.1. Application domain of low cycle plastic fatigue; 4.1.2. General description of the test methods: main issues; 4.2. Phenomenological description of low-cycle fatigue; 4.2.1. Background; 4.2.2. Cyclic work hardening; 4.2.3. Cyclic stress-strain relationships; 4.2.4. Fatigue strength; 4.2.5. Mathematical equations; 4.2.6. General behavior: sequence effects and control mode; 4.3. Adaptation mechanism and cracking during low-cycle fatigue; 4.3.1. Introduction; 4.3.2. Adaptation of the material
4.3.3. Description and elementary interpretation of the adaptation stage within structural alloys: steels

Sommario/riassunto

Fatigue and fracture result in billions of dollars of damage each year.?
This book examines the various causes of fatigue including crack growth, defects, temperature, environmental, and corrosion.?
