Sommario/riassunto	The impending advent of GSM in the early 1990s triggered massive investment that revolutionised the capability of DSP technology. A decade later, the vastly increased processing requirements and potential market of 3G has triggered a similar revolution, with a host of start-up companies claiming revolutionary technologies hoping to challenge and displace incumbent suppliers. This book, with

contributions from today's major players and leading start-ups,
comprehensively describes both the new approaches and the responses
of the incumbents, with detailed descriptions of the design philosophy,
