

1. Record Nr.	UNINA9910876918403321
Titolo	Multimedia information extraction : advances in video, audio, and imagery analysis for search, data mining, surveillance, and authoring / / edited by Mark T. Maybury
Pubbl/distr/stampa	Hoboken, N.J., : Wiley, 2012
ISBN	1-283-54980-8 9786613862259 1-118-21954-6 1-118-21952-X 1-118-21951-1
Descrizione fisica	1 online resource (498 p.)
Classificazione	COM034000
Altri autori (Persone)	MayburyMark T
Disciplina	006.3/12
Soggetti	Data mining Metadata harvesting Computer files
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	section 1. Image extraction -- section 2. Video extraction -- section 3. Audio, graphics, and behavior extraction -- section 4. Affect extraction from audio and imagery -- section 5. Multimedia annotation and authoring.
Sommario/riassunto	"The advent of increasingly large consumer collections of audio (e.g., iTunes), imagery (e.g., Flickr), and video (e.g., YouTube) is driving a need not only for multimedia retrieval but also information extraction from and across media. Furthermore, industrial and government collections fuel requirements for stock media access, media preservation, broadcast news retrieval, identity management, and video surveillance. While significant advances have been made in language processing for information extraction from unstructured multilingual text and extraction of objects from imagery and video, these advances have been explored in largely independent research communities who have addressed extracting information from single media (e.g., text, imagery, audio). And yet users need to search for concepts across

individual media, author multimedia artifacts, and perform multimedia analysis in many domains. This collection is intended to serve several purposes, including reporting the current state of the art, stimulating novel research, and encouraging cross-fertilization of distinct research disciplines. The collection and integration of a common base of intellectual material will provide an invaluable service from which to teach a future generation of cross disciplinary media scientists and engineers. "--
