Sommario/riassunto

From the utilization of textile waste to the high-tech product - this is how modern nonwovens can best be described. Web formation and web bonding processes have recently been enhanced. Nowadays, fibres, granulates, binder and finishing agents are used. This development entails a wider range of applications in the fields of hygiene, medicine, the garment-producing and building industries, interior design as well as further technical uses. This book provides comprehensive information about nonwovens, from the raw material fibres via the manufacturing processes to finishing and to the
