The J-shaped curve and changes in drinking habitMechanisms of alcohol-related strokes; The French paradox and wine drinking; Alcohol and all-cause mortality: an overview; Alcohol, cardiovascular diseases and public health policy; Chairman's summing-up; Index of contributors; Subject index
Sommario/riassunto	Both timely and topical, this book examines the most important aspects of the relationship between alcohol consumption and health. Drawing

together much new and exciting work in this area, it reviews this emotive subject from a dispassionate perspective. It will provide a firm base for further research into the effects of alcohol on the cardiovascular system, and into public health attitudes to what is both a universal pleasure and problem.
