| Autore                  | Mikosch Thomas   |
| Titolo                  | Extreme Value Theory for Time Series : Models with Power-Law Tails   |
| Pubbl/distr/stampa      | Cham : , : Springer, , 2024<br>©2024   |
| ISBN                    | 9783031591563<br>9783031591556   |
| Edizione                | [1st ed.]  |
| Descrizione fisica      | 1 online resource (768 pages)  |
| Collana                 | Springer Series in Operations Research and Financial Engineering Series  |
| Altri autori (Persone)  | WintenbergerOlivier  |
| Lingua di pubblicazione | Inglese  |
| Formato                 | Materiale a stampa   |
| Livello bibliografico   | Monografia   |
| Nota di contenuto       | Intro -- Preface -- Contents -- 1 Introduction -- 1.1 From Poisson's Law to the Fréchet and Pareto Distributions: A Short Excursion into the History of Extreme Value Theory -- 1.2 Empirical Evidence of Power-Law Tails, Extremal Dependence and Clusters in Return Data -- 1.3 What Is this Book About? -- 1.4 What Is Special About this Book? -- Part I Regular Variation of Distributions and Processes -- 2 The IID Univariate Benchmark -- 2.1 Sum-Stable Distributions and Their Domains of Attraction -- 2.2 Max-Stable Distributions and Their Domains of Attraction -- 2.3 Point Processes and Order Statistics -- 2.4 Weak Convergence of Upper Order Statistics -- 2.5 Weak Convergence of the Binomial Processes to a Poisson Process -- 3 Regularly Varying Random Variables and Vectors -- 3.1 Regularly Varying Random Variables -- 3.1.1 Regularly Varying Functions -- 3.1.2 Definition of a Regularly Varying Random Variable -- 3.1.3 Operations on Regularly Varying Random Variables -- 3.1.3.1 Power Transformations and Moments -- 3.1.3.2 Closure of Regular Variation Under Convolution -- 3.1.3.3 Subexponentiality of Regularly Varying Distributions, the Convolution-Root Property, and Regularly Varying Ruin Probabilities -- 3.1.3.4 Closure of Regular Variation Under Multiplication -- 3.1.4 An Excursion to the Estimation of the Tail Index: The Hill Estimator -- 3.2 Regularly Varying Random Vectors -- 3.2.1 The Multivariate Fréchet Distribution -- 3.2.1.1 Convergence of |

Component-Wise Maxima to the Multivariate Fréchet Distribution --  
3.2.1.2 The Exponent Measure of the Multivariate Fréchet Distribution  
-- 3.2.1.3 The Max-Stability Property of the Multivariate Fréchet  
Distribution -- 3.2.2 Regular Variation of Random Vectors with Non-  
Negative Components -- 3.2.2.1 The Homogeneity Property of the  
Limit Measure -- 3.2.2.2 The General Multivariate Fréchet Distribution.  
3.2.2.3 Examples with Independent or Asymptotically Independent  
Components -- 3.2.3 Regular Variation of Random Vectors with  
General Components -- 3.2.4 Equivalent Formulations of Multivariate  
Regular Variation in  $\mathbb{R}^d$  -- 3.2.4.1 The Regular Variation Property does  
not Depend on the Choice of the Norm -- 3.2.4.2 Families of Sets that  
Generate the Regular Variation Property -- 3.2.4.3 The Continuous  
Form of Regular Variation -- 3.2.4.4 Weak Convergence of the Binomial  
Processes to a Poisson Process -- 3.2.4.5 Point Process Representation  
of a Multivariate Fréchet Distribution -- 3.2.5 Operations on Regularly  
Varying Vectors -- 3.2.5.1 Asymptotically Independent Random Vectors  
-- 3.2.5.2 Positively Homogeneous Continuous Mappings Acting on a  
Regularly Varying Vector -- 3.2.5.3 Linear Transformations of Regularly  
Varying Vectors -- 3.2.5.4 The Multivariate Breiman Result -- 4  
Regularly Varying Time Series -- 4.1 Definition of a Regularly Varying  
Sequence -- 4.2 The Tail and Spectral Tail Processes -- 4.3 Time-  
Change Properties of the Spectral Tail Process -- 4.4 A Derivation of  
the Tail Measures from the Distribution of the Spectral Tail Process -- 5  
Examples of Regularly Varying Stationary Processes -- 5.1 IID Regularly  
Varying Sequences -- 5.2 Regularly Varying Linear Processes -- 5.2.1  
Preliminaries -- 5.2.2 Existence of a Univariate Linear Process -- 5.2.3  
Existence of a Multivariate Linear Process -- 5.2.4 The Single Big Jump  
Principle -- 5.2.5 Regular Variation of  $|X|$  -- 5.2.6 The Regular  
Variation Property of a Linear Process -- 5.2.6.1 Univariate Linear  
Processes -- 5.2.6.2 The Vector-AR(1) Process -- 5.3 A Regularly  
Varying Stochastic Volatility Model -- 5.3.1 The Innovations Dominate  
the Volatility -- 5.3.2 The Volatility Dominates the Innovations -- 5.4  
Max-Moving Average Processes -- 5.5 Max-Stable Stationary Processes  
with Fréchet Marginals.  
5.5.1 A Brief Introduction to Max-Stable Processes -- 5.5.2 Regular  
Variation of a Stationary Max-Stable Process with Fréchet Marginals --  
5.5.3 Some Examples -- 5.5.3.1 The Brown-Resnick Process -- 5.5.3.2  
Mixed Moving Maxima (M3) Processes -- 5.5.3.3 Spectrally Stationary  
Max-Stable Processes -- 5.6 Solution to Affine Stochastic Recurrence  
Equations -- 5.6.1 Existence and Stationarity -- 5.6.2 Example: The  
ARCH and GARCH Family -- 5.6.3 The Tails -- 5.6.3.1 Some  
Generalities -- 5.6.3.2 The Grinceviius-Grey Theorem -- 5.6.3.3 The  
Kesten-Goldie Theorem -- 5.6.3.4 The Marginal Tails of a GARCH(1,1)  
Process -- 5.6.3.5 The Regular Variation Property -- 5.6.3.6 Regular  
Variation of a GARCH(1,1) Process -- 5.6.3.7 Properties of the Spectral  
Tail Process -- The Sequence  $(\text{sign}(t))$  -- Independence of  $(|t|)t_0$   
and  $(|-t|)t_1$  -- 5.7 A Queuing Model: The Lindley Process -- 5.8  
Regular Variation of Lagged Products -- Part II Point Process  
Convergence and Cluster Phenomena of Time Series -- 6 Clusters of  
Extremes -- 6.1 Leadbetter's Approach-The Extremal Index -- 6.1.1  
Leadbetter's Mixing Condition D -- 6.1.2 Leadbetter's Extremal Index  
-- 6.1.3 Leadbetter's Condition D' -- 6.1.4 The Extremal Index as  
Reciprocal of the Expected Extremal Cluster Length -- 6.2  
Characterization of the Extremal Index -- 6.2.1 Approximations of the  
Extremal Index -- 6.2.2 The Extremal Index of a Regularly Varying  
Sequence -- 6.3 The Extremal Index for Particular Time Series Models  
-- 6.3.1 Asymptotic Independence of Block Maxima via Coupling  
Arguments -- 6.3.2 Causal Linear Process -- 6.3.3 A Regularly Varying

Stochastic Volatility Process -- 6.3.4 Solution to a Stochastic  
 Recurrence Equation -- 6.3.4.1 The Extremal Index of a GARCH(1,1)  
 Process -- 6.3.4.2 A Characterization of the Extremal Index via Random  
 Walk Theory -- 6.3.5 Max-Stable Process -- 6.3.5.1 The Case  $H=1/2$ .  
 6.3.5.2 Toward the Pickands Constant for  $H=1/2$  -- 6.3.6 The Lindley  
 Process -- 6.4 An Informal Discussion of Extremal Index Estimation --  
 6.4.1 The Blocks Estimator -- 6.4.2 The Runs and Intervals Estimators  
 -- 6.4.3 Northrop's Estimator -- 6.4.4 An Estimator of the Extremal  
 Index Based on the Spectral Cluster Process -- 6.4.5 A Monte-Carlo  
 Study of the Estimators -- 7 Point Process Convergence for Regularly  
 Varying Sequences -- 7.1 Mixing and Anti-Clustering Conditions -- 7.2  
 The Spectral Cluster Process -- 7.3 Convergence to a Cluster Poisson  
 Process -- 7.4 Properties of the Spectral Cluster Process -- 8  
 Applications of Point Process Convergence -- 8.1 Homogeneous  
 Mappings -- 8.1.1 The Point Process of the Norms -- 8.1.2 The Joint  
 Limit Distribution of Maxima and Minima -- 8.1.3 The Joint Limit  
 Distribution of the Maximum and the Second Largest Order Statistic of  
 the Norms -- 8.1.4 The Extremal Index Function of a Multivariate Time  
 Series -- 8.2 The Cluster Length of the Exceedances -- 8.2.1 The Point  
 Process with Time Stamps -- 8.2.2 The Point Process of the  
 Exceedances -- 8.2.2.1 Convergence to a Compound Poisson Process  
 -- 8.2.2.2 Extremal Cluster Probabilities -- 8.2.3 Order Statistics of the  
 Norms -- 8.3 Examples of Cluster Processes -- 8.3.1 Causal Linear  
 Process -- 8.3.1.1 The Mixing Conditions  $A_n$  and  $A_n$  -- 8.3.1.2  
 Spectral Cluster Process and Point Process Convergence -- 8.3.1.3  
 Some Applications -- The Joint Limit Distribution of Maxima and  
 Minima -- 8.3.2 Solution to an Affine Stochastic Recurrence Equation  
 -- 8.3.2.1 The Mixing Conditions  $A_n$  and  $A_n$  -- 8.3.2.2 Extremal  
 Cluster Probabilities -- Part III Infinite Variance Central Limit Theory  
 and Related Topics -- 9 Infinite-Variance Central Limit Theory -- 9.1  
 Preliminaries -- 9.1.1 Some Facts About Multivariate -Stable  
 Distributions -- 9.1.2 The Anti-Clustering Condition.  
 9.1.3 The Mixing Condition -- 9.1.4 Further Discussions on the  
 Assumptions and Their Comparison with the Literature -- 9.2 -Stable  
 Central Limit Theory -- 9.3 Some Examples -- 9.3.1 -Stable Central  
 Limit Theorem for a Regularly Varying Stochastic Volatility Process --  
 9.3.1.1 The Case When  $\sigma$  Is Bounded from Above and Below by Positive  
 Constants -- 9.3.1.2 The Case of Unbounded Volatility Under Mixing --  
 9.3.2 Regularly Varying Causal Linear Process -- 9.3.3 The Solution to  
 an Affine Stochastic Recurrence Equation -- 10 Self-Normalization,  
 Sample Autocorrelations and the Extremogram -- 10.1 Self-Normalized  
 Sums -- 10.1.1 Preliminaries -- 10.1.2 Joint Convergence of Sums and  
 Maxima -- 10.1.3 Ratio Limit Theory for Sums and Maxima -- 10.1.4  
 Limit Theory for Studentized Sums -- 10.1.5 Greenwood Statistics --  
 10.1.6 Some Applications -- 10.1.6.1 The Anti-clustering and Mixing  
 Conditions for Solutions of Affine Stochastic Recurrence Equations --  
 10.1.6.2 Some Illustrations for a Causal AR(1) Process -- 10.1.6.3 Some  
 Illustrations for the Squared Volatility of a GARCH Model -- 10.1.6.4  
 Consequences of the Extremal Dependence for Ratio Plots -- 10.2 The  
 Sample Autocovariance Function -- 10.2.1 The Case  $2 < \alpha < 4$   
 -- 10.2.2 The Case  $0 < \alpha < 2$  -- 10.2.3 Examples -- 10.2.3.1  
 The Sample ACVF and ACF for a Stochastic Volatility Process --  
 10.2.3.2 The Sample ACVF and ACF for the Solution to an Affine  
 Stochastic Recurrence Equation -- 10.3 The Extremogram -- 10.3.1  
 The Extremogram: An Autocorrelation Function for Extreme Events --  
 10.3.2 Variations on the Extremogram -- 10.3.3 Examples of  
 Extremograms -- 10.3.3.1 Causal Linear Process -- 10.3.3.2 The  
 Solution to an Affine Stochastic Recurrence Equation -- 10.3.3.3 Max-

Stable Process with Fréchet Marginals -- 10.3.3.4 Asymptotically  
Independent Sequences.  
10.3.4 The Cross-Extremogram of a Multivariate Time Series.
