Sommario/riassunto	This successor volume builds upon the first book with additional chapters meant to inspire readers to take action towards a healthier planet. It focuses on closing the gap between scientific insights on pressing environmental issues that do not often reach the general public, and putting that scientific knowledge in the hands of everyday people who can use these insights to take action against climate change, pollution, and biodiversity loss. The goal of this work is to share fascinating facts about nature and sustainability to inspire taking action toward a healthier planet, and to provide ideas on how we can take action to solve environmental issues in an informed and easy-to-understand way. The chapters are sourced from the author's work published on medium.com/@ErlijnG with added content not available on medium.com. All chapters are based on open-access research articles covering various environmental issues and solutions that are not often disseminated in popular discourse but are nonetheless important for non-scientific audiences to understand and become

familiar with. They allow readers to explore the broad range of concepts and issues and recognize the far-reaching consequences, and trigger the desire to take action. Also, each chapter provides concrete ideas of how we as individuals can take action in daily life to make a positive difference related to the issues described. The book is a multimodal work, as it includes images and videos that accompany the text.
