## Sommario/riassunto

This book, the second of two volumes, explores India's economic development from the Gupta Empire (400AD) through to modern day India. The specific characteristics of economic development in India are examined to help determine development paths India can pursue to create sustainable development in the 21st century. The transition from the primary sector to the secondary sector, through the process of industrialisation and in turn the move towards the services sector, is discussed in relation to climate change, technological innovation, and the pressure on resources posed by population growth. This book aims to contextualise India's economic development within the political economy of trade, with a particular focus on institutions such as the IMF and the British East India Company. It will be relevant to students and researchers interested in economic history, development economics, and the political economy. Sangaralingam Ramesh is an Economics Tutor in the Department of Continuing Education at the University of Oxford and a Senior Teaching Fellow in Economics at University College London, UK. He has been an Associate Professor in Economics at the Université Paris Dauphine GBD and Economics Module Leader at Kings College London.
