Sommario/riassunto	Like its companion volume, Anatomy of the Eyelid, Orbit, and Lacrimal System: A Dissection Manual, this unique dissection manual provides a detailed step-by-step approach to the dissection of the forehead, face, and neck, in a structural, layered approach. This dissection manual follows an atlas format, with color photographs from past professional lectures and classroom courses, as well as line drawings, enhancing descriptions. Clinical correlations are also interjected throughout to highlight the importance of individual anatomic structures. Chapters describe the preparation and storage of specimens and the dissection of the forehead and eyebrows, the midface, nose, ear, and lower face, and the neck. Anatomy of the Forehead, Face, and Neck: A Dissection Manual is an expertly written, invaluable resource for surgeons seeking to enhance their knowledge and surgical skills.
