Sommario/riassunto

This edited volume provides a comprehensive analysis of the intricate dynamics of the Russia-Ukraine conflict, particularly within the context of sustainable development in Africa. The book explores the multifaceted consequences of the war, drawing attention to its socioeconomic, environmental, and political implications. It also emphasizes the significance of sustainable development on a global scale, positioning itself at the intersection of conflict studies and sustainable development literature. Chapters discuss the international response to the conflict, including sanctions on Russia and disruptions in global supply chains, which has had significant implications for countries in Africa that rely on Russia and Ukraine for essential commodities. The history and root causes of the conflict are analyzed, highlighting the contrasting narratives – the pro-Russian perspective and the pro-Western viewpoint. Underscoring the impact of the Russia-Ukraine conflict on global peace, sustainable development, and the achievement of Sustainable Development Goals (SDGs) by the 2030 deadline, this volume will be of interest to researchers and students focusing on development, food systems, peace and conflict, security studies, international relations, and the SDGs.
